This Phase I Environmental Site Assessment Report for the Mission Tiki Drive-In Theatre and related sites located at 10798 Ramona Avenue in Montclair, California, dated February 20, 2019 was prepared by Edward de Souza and Justin Rauzon and reviewed by Kevin Green.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. The resumes for the individuals below are included in **Appendix F**. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Justin Rauzon, R.E.P.A. Project Manager SCS Engineers

Kevin W. Green, P.G. Project Director SCS Engineers

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Howard Industrial Partners to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Mission Tiki Drive-In Theatre and related sites located at 10798 Ramona Avenue, Montclair, California (the "Property"). The Property is also associated with the addresses 4359 State Street, 4407 State Street, 4356 Mission Boulevard, and 4410 Mission Boulevard. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

The Property is located on the western side of Ramona Avenue and is bounded to the north by State Street and to the south by Mission Boulevard. It is approximately 27.4 acres and is currently developed primarily with a drive-in theatre with four movie screens and a large asphalt-paved parking lot, which is also used as a swap meet. A two-story office building and a single-story storage building are located at the north-central portion of the Property. A concrete-paved area with the foundations of former industrial buildings is located at the northwestern corner of the Property. Montclair Tire Company occupies a metal building located on a triangular-shaped area at the northeastern corner of the Property, but is not currently an operating business.

The Property was undeveloped land from 1897 to at least 1903. By 1928, it was developed with orange groves and two rural residential/farmhouse structures. By 1959, most of the orange groves had been removed and the Property was developed with one large drive-in theater and associated office, storage, and refreshment structures. The southwestern corner of the Property (likely 4356 Mission Boulevard) was developed with one small building and had several trailers stored outside. Two industrial-type structures were added at the northwestern portion of the Property (4359 and 4407 State Street). In 1960, Bevelite Corp. was listed at 4407 State Street. By 1964, the remaining orange groves had been removed and a warehouse-type structure (unknown address) was constructed on the northeastern corner of the Property. In the early 1970s, Gallagher's Garage, F&S Automotive Repair, and PMA Irrigation Equipment Co. were listed at 4356 and 4410 Mission Boulevard (the southwestern portion of the Property).

The drive-in theater was expanded to four screens in the early 1970s, which also resulted in the removal of the southwestern buildings and related trailers. The industrial activities at the northwestern portion of the Property expanded in the late 1970s and 1980s, with at least five industrial buildings. Tenants in these buildings included Dumas Machine and Tool Company, Valley Metal Treating Company, and SCSM&E. By 1989, some of the northwestern industrial buildings had been removed and operations appeared to have ceased. All of the northwestern industrial buildings were removed by 2009.

In general, the historical operations associated with the drive-in theater, which covers most of the Property, are not commonly associated with elevated environmental risk. Historical information reviewed, however, does not provide a complete picture of historical activities at the northwestern, northeastern, and southwestern corners of the Property. According to a previous environmental reports reviewed, known historical operations at the northwestern corner of the Property included metal machining, metal treatment, and manufacture of truck bumpers and roll bars, including chrome plating. A 1,000-gallon gasoline underground storage tank (UST) was reportedly removed from the northwestern portion of the Property in 1989. Further, chlorinated solvents were detected in soils during previous investigations.

Based on a review of the information available, SCS concurs with the findings of previous investigations and remedial action reports that hydrocarbon-impacted soil at two former machine pits located at the northwestern portion of the Property, and the area beneath the former gasoline UST, have been addressed to the satisfaction of the appropriate regulatory agency. These areas are

considered historical recognized environmental conditions (HRECs). However, the previous investigations do not appear to have adequately investigated the pump island for former the gasoline UST, the potential for historical chrome plating, or the past use of chlorinated solvents. These areas are considered RECs.

The commercial building located at the northeastern corner of the Property, currently occupied by Montclair Tire Company, has existed since at least 1964. At the time of the site visit, more than a dozen trucks were stored outside, but it did not appear to be an operating business. Two manhole covers on the southern side of the building appeared to be associated with a septic system or are otherwise sewer-related. The building has former service bays but does not reportedly have inground hydraulic lifts and was reportedly used as a support warehouse for other Montclair Tire Company facilities in the region. However, no information was available about other former tenants. This data gap is considered significant and constitutes a REC.

An unknown commercial building was located at the southwestern corner of the Property between at least 1959 and 1966. Aerial photos showed that it was gone by 1975, when the drive-in theater was expanded to four theaters. SCS could find no information about the address or type of operation that existed at this portion of the Property. The address would have been approximately 4300-4400 Mission Boulevard (even numbers). The absence of information about this area of the Property constitutes a significant data gap and a REC.

Regulatory agency and database information identified a few known and suspected contamination sites in the area surrounding the Property. With the possible exception of an industrial dry cleaning facility located approximately 300 feet west of the northwestern corner of the Property, based on available information, it is unlikely that any of these sites have affected the environmental condition of the Property directly. The Spiegel Carpet facility operated a tetrachloroethene (PCE) dry cleaning machine from at least 1982 until an unknown date (the permit is listed as inactive). Based on the distance and the absence of a documented release, this site is not considered a REC. However, if during future investigation PCE is detected in soil vapor at the northwestern portion of the Property, this site could be considered a potential source.

Conclusions

In summary, SCS performed a Phase I Environmental Site Assessment of Mission Tiki Drive-In Theatre and related sites located at 10798 Ramona Avenue, Montclair, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed evidence of conditions indicative of recognized environmental conditions in connection with the Property, as discussed above. Additional investigation of soil and soil vapor is recommended.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Howard Industrial Partners (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the Mission Tiki Drive-In Theatre and related sites located at 10798 Ramona Avenue, Montclair, California 91763 (the "Property"). The Property is also associated with the addresses 4359 State Street, 4407 State Street, 4356 Mission Boulevard, and 4410 Mission Boulevard. A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

2 PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA Section 101, and petroleum products, on, at, in, or to the Property.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. On request, SCS can provide support for clients with continuing obligations, as appropriate.

3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining properties performed on November 28 and December 17, 2018.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).
- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the Mission Tiki Drive-In Theatre and related sites, located in Montclair, California, has been prepared specifically for Howard Industrial Partners. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content, or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of Howard Industrial Partners and payment to SCS of a fee for such letters.

5 LIMITATIONS AND ASSUMPTIONS

The investigation focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances which are not currently deemed hazardous by the U.S. Environmental Protection Agency (EPA) or California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I ESA:

• Specialized knowledge or experience of the User.

• The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations SCS did not visually inspect the interior of all of the storage units located at the northwestern portion of the drive-in movie theater parking lot. The insides of a few of the units were visited and the site contacts indicated that they were all rented by swap meet vendors for storage of commercial goods. Based on the available information, this is not considered a significant data gap.
- Physical Obstructions to Observations None.
- Outstanding Information Requests None.
- Historical Data Sources Failure Limited historical information was identified to document historical activities on the northwestern, northeastern, and southwestern portions of the Property. The absence of complete historical information about these areas of the Property constitutes a significant data gap and is also considered a REC.
- Other Limitations None.

6 GENERAL SITE CHARACTERISTICS

SITE LOCATION

The Property is located on the western side of Ramona Avenue and is bounded to the north by State Street and to the south by Mission Boulevard. It is associated with the addresses 10798 Ramona Avenue, 4359 State Street, 4407 State Street, 4356 Mission Boulevard, and 4410 Mission Boulevard. It has been assigned assessor's parcel numbers (APNs) 1012-151-20, -27, -28, & -29 and 1012-161-01 through -05. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SITE DESCRIPTION

The Property is approximately 27.4 acres and is currently developed primarily with a drive-in theatre with four movie screens and a large asphalt-paved parking lot. The large paved area is also used as a swap meet. A driveway extends north-south along the eastern side of the Property and wraps into the center of the paved parking lot. A two-story office building, a small restaurant/refreshment building, and a single-story storage building are located at the north-central portion of the Property. A concrete-paved area with the foundations of former buildings is located at the northwestern corner of the Property. Montclair Tire Company occupies a metal building located on a triangular-shaped area at the northeastern corner of the Property.

ADJOINING PROPERTY USE

- North State Street adjoins the Property immediately to the north. The land across State Street is occupied by a Southern Pacific railroad right-of-way, Ramona Auto Center (10600-10662 Ramona Avenue), and a man-made stormwater basin.
- South Mission Boulevard adjoins the Property to the south. Montclair Mission Plaza (4421 through 4467 Mission Boulevard) is located across the street to the south and includes a Panda Express, Dairy Queen, Little Caesars Pizza, Mission Tobacco & MiniMart, Alberto's Mexican Food, Speedy Lube, and Sal's Auto Repair. An unmarked commercial building

(4409 Mission Boulevard) and the Hacienda Mobile Home Estates (4361 Mission Boulevard) is located across the street to the south of the western side of the Property.

- East Ramona Avenue adjoins the Property directly to the east; the intersection of Ramona Avenue and Dale Street is also to the east of the Property. JR Distributor International Inc. occupies a recently constructed warehouse building to the east of the northern half of the Property (4518 Dale Street). Two undeveloped lots, one with foundations of former buildings, and four residential houses (10825 through 10849 Ramona Avenue) lie across Ramona Avenue to the east of the southern half of the Property.
- West County Road 20010 adjoins the northwestern corner of the Property to the west. Tim's Wood Specialties (4329 State Street #S) and MDL Embroidery (4329 State Street #I) are located across the street to the west of the northwestern corner of the Property. Private residences and a vacant lot (4345 through 4355 State Street) adjoin the center of the Property to the west. Several old cars, trailers and other equipment are stored outside on these residential sites. Conley's Greenhouse Manufacturing & Sales occupies several industrial buildings to the west of the southern half of the Property (4344 and 4346 Mission Boulevard).

7 PHYSICAL SETTING

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Ontario, California, 7.5-minute topographic maps, the Property is located in the upper Santa Ana Valley at an average elevation of approximately 915 feet above mean sea level (amsl). The Property slopes from the northeastern corner (with an estimated elevation of 921 amsl) towards the southeastern corner (with an estimated elevation of 921 amsl) towards the southeastern corner (with an estimated elevation of approximately 902 feet amsl. Regional topography is gently sloping, also with a slope toward the southwest. The San Gabriel Mountains are approximately 5.5 miles north of the Property and the San Antonio Creek Channel is located approximately 0.5 miles west of the Property.

GEOLOGY AND SOILS

According to the Dibblee Geologic Map of the San Dimas and Ontario Quadrangles (2002), the Property is underlain by Quaternary alluvial gravel and sand of valley areas. These surficial sediments consist of alluvial fan deposits composed of boulder gravel near the mountains, with finer gravel and sand grading outward. Underlying the Quaternary alluvium is unconsolidated Tertiary to Quaternary sediments and consolidated Tertiary sediments of continental origin.

GROUNDWATER

The Property lies in the Upper Santa Ana Valley – Chino Subbasin. According to the information provided by the Chino Basin Water Master, the first regional aquifer in the area of the Property is approximately 200 to 300 feet below ground surface (bgs). Based on topography, groundwater is anticipated to flow towards the south-southwest. However, localized variations in groundwater flow direction may occur.

RADON

According to the California Department of Public Health's February 2016 Radon Program report, screening in the area of the Property (91763 zip code) found no locations (out of three) where buildings had radon levels greater than or equal to 4 picocuries per liter (pCi/L), the EPA action level. The maximum radon result for the Property's zip code was 0.3 pCi/L. Typically, radon would not be

anticipated in an area of deep alluvial geology such as in the Property area. Note that elevated radon levels may also be attributed to other radon sources such as leaking natural gas or numerous building products such as drywall, cinderblock, concrete floors, brick, or stone products. Based on the available information, elevated radon gas is not expected in the area of the Property.

8 SITE INSPECTION

Edward de Souza of SCS conducted an inspection of the Property and surrounding area on November 28, 2018. Mr. de Souza and Justin Rauzon of SCS also completed a second site inspection on December 17, 2018. An aerial photo and photographs of the Property are provided in **Appendix B**.

Access to the Property was provided by John Ewart, a real estate broker with Newmark Grub Knight Frank. The asphalt-paved movie theater parking lot/swap meet area were largely vacant at the time of the site visits, with the exception of custodians cleaning the Property. There are four large movie screens, one in each corner of the large parking lot, and a refreshment stand in the center. The movie theater/swap meet offices and warehouse space storing swap meet and theater signs and administrative equipment (drive-in theater speakers, golf carts, a forklift, food vendor equipment, etc.) are located inside a building on the north-central portion of the Property. Some oil staining was observed near the forklift inside the warehouse, but the staining appeared to be on the surface of the concrete only, with no obvious pathway to the subsurface soil. A snack bar building is also located outside the southwestern corner of the office/warehouse building. Swap meet vendor storage units are located at the northwestern corner of the asphalt-paved parking lot, in a long metal building with rollup doors and converted shipping containers. SCS observed the interior of a few of these storage units. The current Property owner, Mr. Frank Huttinger, indicated that all of the units were used by swap meet vendors to store commercial goods. The eastern and southern sides of the Property are bordered with tall trees.

A largely concrete-paved area is located at the northwestern corner of the Property. Remnants of building foundations associated with the historical address 4359 State Street are still present. A few rectangular areas were noted from which the concrete had been removed. A few of these areas had been patched with asphalt and/or concrete. These areas are associated with former pits and areas investigated and excavated in the late 1980s and early 1990s, as discussed further in Section 11. The swap meet/theater business uses this area of the Property to manage the solid waste generated during operations. There are a few loading dock ramps up against which solid waste dumpsters are placed, including one dumpster with a hydraulic compactor for cardboard waste. A few piles of swap meet trash were also observed in this area.

A concrete and metal building is located on a triangular area at the northeastern corner of the Property. This structure does not appear to have its own address, but it has a sign indicating it is occupied by Montclair Tire Company. It did not appear to be a business that has recently been operating, as the building was closed up. Two manhole covers on the southern side of the building appeared to be associated with a septic system or otherwise sewer related. However, the site personnel did have any information about these manhole covers or the two capped pipes nearby. The area surrounding the building is paved with asphalt and concrete. Dozens of trucks and vans (and a few shipping containers) were parked around the perimeter of this area. Some superficial oil staining was observed on the pavement at several areas from leaking trucks, but these stains are considered *de minimis* in nature. SCS was unable to visit the interior of this building during the site visits. Mr. Ewart sent photos of the inside of the building on December 20, 2018. According to Mr. Ewart, Montclair Tire Company is not currently operating at this facility. The building is used to warehouse some equipment, furniture, and sanitary products like paper towels and toilet papers. He told SCS that there were no in-ground hydraulic lifts inside the building. Montclair Tire Service

reportedly had several tire service locations in the region and this building was used only as a storage area. Mr. Ewart did not know how long Montclair Tire Service had occupied the building or what other historical tenants may have occupied the building. The absence of complete information about the historical operations at this building is considered a significant data gap.

HAZARDOUS SUBSTANCES

Maintenance paint, motor oil, a few 5-gallon gasoline canisters, and common cleaning products were observed in the warehouse portion of the administrative building on the north-central portion of the Property. A food grease container was observed outside the southern end of the snack bar on the north-central portion of the Property. Some staining was observed on the concrete near the container. Since the source of this staining is likely food grease, SCS does not consider it a REC.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Stormwater flows to drains throughout the Property, ultimately joining the municipal storm sewer system.

DISTURBED AREAS

As noted above, several rectangular cut areas were noted at the concrete area at the northwestern corner of the Property. Some of these had been patched with asphalt. As discussed in Section 11, previous investigations and soil excavations were conducted at former pits and a former underground storage tank (UST) area on this portion of the Property. The historical operations at the northwestern portion of the Property constitute a REC.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators or other hydraulic equipment was observed at the Property.

WELLS

No monitoring or water supply wells were observed on the Property during the site inspection.

ELECTRICAL EQUIPMENT

One pad-mounted Southern California Edison (SCE) electrical transformer servicing the building was noted on the northern side of the Property. SCE has stated that they have never specified the purchase of distribution transformers utilizing PCBs as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units. Based on the available information, no significant environmental impact to the Property is anticipated from this transformer.

WASTEWATER

According to the User Questionnaire returned to SCS by the client, sanitary wastewater is discharged to municipal sewers. A septic tank and leach field located near the central snack bar building was decommissioned when it was connected to the municipal sewer.

DRINKING WATER

Drinking water is supplied to the Property by the Monte Vista Water District. All large public water suppliers in California have been required to test their water and comply with federal and state drinking water standards since the mid-1980s. Consequently, lead and other contaminants of concern are not expected to be present above applicable primary and secondary drinking water standards.

STORAGE TANKS

As noted above, two manholes with two unexplained cut and capped pipes were noted on the southern side of the Montclair Tire Company building. SCS opened the two manhole covers and did not observe evidence of UST fill ports. They appeared to be related to the sewer or possibly a septic system. As discussed in Section 11, a UST was removed from the northwestern portion of the Property in the late 1980s.

No other evidence (fill ports, vent lines, or dispensers) of USTs was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

VISUAL INSPECTION OF ADJOINING SITES

No obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

9 INTERVIEWS

Mr. Huttinger, Chairman & CEO of De Anza Land and Leisure Corp., completed an Owner Questionnaire included as **Appendix G**. He indicated that the Property was acquired by the partners of the Valley Drive-in Theater Company in 1964 and was later conveyed to the Mission Drive-in Theater Company. Prior to its development as a drive-in theater facility, it was reportedly orange groves. Other information provided by Mr. Huttinger and his broker, Mr. Ewart, is discussed in the appropriate sections throughout this report.

10 SITE HISTORY

Site history was evaluated from the following sources:

- Historical U.S. Geological Survey (USGS) topographic maps provided by Environmental Data Resources (EDR) (November 14, 2018).
- Historical aerial photographs provided by EDR (November 15, 2018).
- A search was made of EDR-Sanborn collection and no maps of the Property were found (November 14, 2018).
- City of Montclair building permit information.
- A City Directory review report provided by EDR (November 15, 2018).
- Previous environmental reports (discussed further in Section 11).

Copies of topographic maps, historical aerial photographs, and city directories are included in **Appendix C**.

		1
Year	Description	Source
1897 to 1903	The Property was undeveloped land. Roads also adjoined the Property to the north, south, and east. A railroad right-of-way was located across the street to the north. Creeks bordered the Property to the west and east. Otherwise, the surrounding area was also shown to be mostly undeveloped land.	Topographic Maps
1928	The topographic map did not have coverage of the Property or immediately surrounding sites. The aerial photo showed the Property was developed with orange groves. Two rural residential/farmhouse structures were present on the central-eastern side of the Property. With the exception of the adjoining roads and railroad right-of-way, the immediately surrounding area was completely developed with orange groves and the occasional farmhouse.	Aerial Photograph and Topographic Map
1933	One small structure was depicted on the central- eastern side of the Property. East Fifth Street adjoined the Property to the south. Southern Union railroad right-of-way was located to the north, beyond an unnamed road. Small structures, likely rural farmhouses, were also depicted across the roads to the east and south.	Topographic Map
1938	The Property and surrounding area appeared essentially the same as on the 1928 aerial photograph.	Aerial Photograph
1942	The Property and surrounding area appeared essentially the same as on the 1933 topographic map. The roadway to the north was called Ontario Boulevard.	Topographic Map
1944	The Property was depicted as agricultural orchards with one small structure at its central-eastern edge. The adjoining sites were also depicted as orchards, with a few small structures.	Topographic Map

Year	Description	Source
	A small residential-type structure was added at the northwestern corner of the Property. Otherwise, the Property remained the same as shown on the 1938 aerial photograph.	
1946	The land to the west of the northern half of the Property was cleared of orange groves and developed with a dirt road and a few small structures. The area across the street to the east of the southeastern portion of the Property was also cleared of orange groves and developed with several structures (a mixture of what appeared to be residences and industrial buildings).	Aerial Photograph
	No significant changes from the 1946 aerial photo were noted on the Property.	
1948	Additional residential-type structures were located across the street to the east of the Property (10825 through 10839 Ramona Avenue). No other significant changes from the 1946 aerial photo were noted on adjoining sites.	Aerial Photograph
1953	The Property appeared essentially the same as on the 1948 aerial photograph. A few more buildings appeared to the west of the Property.	Aerial Photograph
1954	The Property was mostly depicted as agricultural orchards with small structures located at the northwestern corner and central-eastern side.	Topographic Map
1904	Relative to the 1944 topographic map, additional structures were depicted to the west of the northern half and east of the southern half of the Property.	
1955	Between 1955 and 1959, buildings were constructed at the northwestern corner of the Property (4359 State Street). In 1959, Dumas Machine and Tool Company occupied these industrial buildings.	Previous Environmental Reports

Year	Description	Source
1959	With the exception of a few small areas, the Property had been cleared of orange groves and developed into a large drive-in theater with one screen and a refreshment stand. The southwestern corner was developed with one small building and had trailers on it (4356 Mission Boulevard). Structures corresponding to what are now the office/warehouse, storage building, and snack bar were located on the north- central portion of the Property. Two additional structures were added on the northwestern portion of the Property (4359 State Street). The northeastern portion of the Property was partially cleared of vegetation and graded.	Aerial Photograph
	Some of the orange groves to the north, west, and south were cleared. A few structures were added across the street to the south.	
1960	Bevelite Corp. was listed at 4407 State Street.	City Directories
1964	The Property remained largely unchanged from the 1959 aerial photograph. The remaining vegetation at the northeastern corner of the Property was removed and replaced with a structure corresponding to the current one occupied by Montclair Tire Company.	Aerial Photograph
	Two structures were added to the west of the southern portion of the Property (4344 and 4346 Mission Boulevard). The remaining orange groves across the street to the north were removed.	
1966	No significant changes from the 1964 aerial photo were noted on the Property or adjoining sites.	Aerial Photograph

Year	Description	Source
1967	The Property was developed with a drive-in theater, office/storage buildings, and snack bars. Two structures were present along the southern edge of the Property, two were located on the northwestern portion of the Property, and one structure was located at the northeastern corner of the Property. One small structure was located at the central-eastern edge of the Property. Valley Metal Treating Company reportedly became the tenant at 4359 State Street.	Previous Environmental Reports and Topographic Map
	The surrounding area was developed as discussed in the 1964 and 1966 aerial photos. The area beyond the railroad to the north was undeveloped. The other adjoining sites were residential or developed with commercial/warehouse buildings.	
1970	Gallihers Garage (<i>sic</i>) was listed at 4356 Mission Boulevard. PMA Irrigation Equipment Co. was listed at 4410 Mission Boulevard.	City Directory
1972	A building permit for gas piping was issued to Chas. Gallager (<i>sic</i>) for 4356 Mission Boulevard.	Building Permits
1973	With the exception of the addition of the storage unit building, no significant changes from the 1967 topographic map were noted on the Property or adjoining sites.	Topographic Map
	The drive-in theater was expanded to four screens surrounding the central snack bar building. The structure and trailers previously at the southwestern corner of the Property were removed. F&S Automotive Repair was listed at 4356 Mission Boulevard.	Aerial Photograph and City Directories
1975	The orange groves across the street to the east of the northern half of the Property were removed. Vehicles were parked in rows across the street and railroad tracks to the north of the eastern side of the Property. Private individuals were listed at residences across the street to the east of the Property (10825 to 10849 Ramona Avenue).	

Year	Description	Source
1976	SCSM&E, a manufacturer of truck bumpers and roll bars, reportedly occupied 4359 State Street from 1976 to 1987. No significant changes from the 1973 topographic map were noted on the Property or adjoining sites. Some of the Property and surrounding area was depicted as part of the general Montclair urban footprint.	Previous Environmental Reports and Topographic Map
1977	No significant changes were noted on most of the Property. The industrial activities appeared to have expanded at the northwestern corner of the Property, including small structures and outdoor storage of equipment. The warehouse building at the northeastern corner of the Property was fenced off from the theater areas.	Aerial Photograph
	Additional residences and commercial business operations were added to the west of the Property.	
1981	The Property and surrounding area appeared essentially the same as on the 1976 topographic map. One new structure was added at the northwestern corner of the Property.	Topographic Map
	Most of the Property continued to be occupied by the four drive-in theaters. Cars and popup tents were parked on the paved central areas of the Property. The northwestern portion of the Property was developed with at least five industrial buildings, some of which were connected and appeared to function as a single structure.	Aerial
1983	The mobile home park was developed across the street to the south of the western portion of the Property (4361 Mission Boulevard). The smaller of two warehouse buildings located to the west of the southern half of the Property was replaced with a larger building. The man-made reservoir was developed across the street and railroad to the north of the Property and was partially filled with water.	Photograph

Year	Description	Source
1989	The Property appeared essentially the same as on the 1983 aerial photograph, except that no operations appeared to be ongoing at the northwestern buildings. One or two of the northwestern buildings appeared to have been removed.	Aerial Photograph
	Additional commercial buildings were added to the north and south of the Property.	
1990	Burnup & Sims of California Inc. was listed to the south of the Property at 4447 Mission Boulevard.	City Directories
1994	No significant changes from the 1989 aerial photo were noted on the Property or adjoining sites.	Aerial Photograph
2002	Only two buildings remained at the northwestern corner of the Property, with the remaining area appearing to be concrete with some darker rectangular patches.	Aerial Photograph
2003	Building permits were issued to connect 4410 Mission Boulevard to the city sewer. The city agreed to waive sewer connection fees due to the need to acquire a portion of the Property for construction of the Ramona Avenue Grade Separation project. Permit information also noted that two loads of 2,000 gallons each were pumped from a septic tank at 4300 Mission Boulevard. Carpet Auctions was listed at 10798 Ramona Avenue.	Building Permits and City Directories
	A barber shop/salon, dollar discount store, and other commercial shops were listed at 4439 Mission Boulevard, to the south of the Property.	
2005	No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial Photograph
	Electrical upgrades for a snack bar area were permitted at 4407 State Street. Maria Alvarado was listed at 10798 Ramona Avenue. AOL Movie Phone was listed at 4407 State Street.	Building Permits
2008	Mission Drive In Theater, Xiang Ning Han Dental Corp., and Mission Adult Day Health Care were listed at 4439 Mission Boulevard, restaurants, and other commercial shops were listed at 4439 and 4467 Mission Boulevard, to the south of the Property.	and City Directories

Year	Description	Source
	All of the buildings appeared to have been removed from the northwestern portion of the Property.	
2009	Ramona Avenue was under construction to the east of the Property. These construction activities involved taking portions of what had been part of the eastern edge of the Property to build an overpass that crossed State Street and the railroad.	Aerial Photograph
2010	KCL Furniture was listed at 10798 Ramona Avenue.	City Directories
2012	The Property and surrounding area appeared essentially the same as the 2009 aerial photo. A building permit was issued for temporary structures for a special event at 4410 Mission Boulevard. The 2012 topographic map does not include site-specific details. No significant changes from the 1981 topographic map were noted on the Property or adjoining sites.	Aerial Photograph, Building Permits, and Topographic Map
2016	The Property and surrounding areas appeared essentially the same as the 2012 aerial photograph. A building permit was issued for the installation of a grease interceptor and plumbing inside a building at 10798 Ramona Avenue.	Aerial Photograph and Building Permits

HISTORICAL USE SUMMARY

The Property was undeveloped land from 1897 to at least 1903. By 1928, it was developed with orange groves and two rural residential/farmhouse structures. Additional residential-type structures were added at the northwestern corner of the Property in the mid-1940s and 1950s. By 1959, most of the orange groves had been removed and the Property was developed with one large drive-in theater and associated office, storage, and refreshment structures. The southwestern corner of the Property (likely 4356 Mission Boulevard) was developed with one small building and had several trailers stored outside. Two industrial-type structures were added at the northwestern portion of the Property (4359 and 4407 State Street). In 1960, Bevelite Corp. was listed at 4407 State Street. In 1964, the remaining orange groves had been removed and a warehouse-type structure (unknown address) was constructed on the northeastern corner of the Property. In the early 1970s, Gallagher's Garage, F&S Automotive Repair, and PMA Irrigation Equipment Co. were listed at 4356 and 4410 Mission Boulevard (the southwestern portion of the Property). The southwestern buildings and related trailers were removed by 1975.

The drive-in theater was expanded to four screens in the early 1970s. This expansion resulted in the removal of the structure and trailers at the southwestern corner of the Property. The industrial activities at the northwestern portion of the Property expanded in the late 1970s and 1980s, with at least five industrial buildings. Tenants in these buildings included Dumas Machine and Tool Company, Valley Metal Treating Company, and SCSM&E. By 1989, some of the northwestern

industrial buildings had been removed and operations appeared to have ceased. All of the northwestern industrial buildings were removed by 2009.

In general, the historical operations associated with the drive-in theater, which covers most of the Property, are not commonly associated with elevated environmental risk. Historical information reviewed, however, does not provide a complete picture of historical activities at the northwestern, northeastern, and southwestern corners of the Property. As discussed in Section 11, historical industrial activities at the northwestern portion of the Property are associated with elevated environmental risk and resulted in documented releases of hazardous substances to the environment. Based on the available information, this area of the Property constitutes a REC. Similarly, limited historical information was identified to document historical activities on the northeastern portions of the Property. Available information suggests that historical operations have included, at a minimum, automobile repair activities. The absence of complete historical information about these areas of the Property constitutes a significant data gap and is also considered a REC.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes is considered to be a *de minimis condition* and collection and analysis of soil samples for pesticides is unwarranted.

HISTORICAL USE OF ADJOINING SITES

With the exception of roads and a railroad right-of-way located to the north, the adjoining sites were also undeveloped or agricultural land in the later 1800s and early 1900s. By 1928, the surrounding area was largely developed with orange groves, with a few rural farmhouses. Between the mid-1940s and 1980s, the adjoining sites were cleared of orange groves and developed with a mixture of residences, commercial businesses, and industrial buildings. Ramona Avenue east of the Property was expanded in the late 2000s, with the addition of an overpass over the railroad tracks. Historical businesses near the Property have included industrial businesses, automobile repair businesses, and commercial shopping center tenants. No obvious indications of RECs were identified at the adjoining sites.

11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS attempted to review previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

PREVIOUS ENVIRONMENTAL REPORTS

The following previous environmental reports were provided to SCS for review:

San Bernardino County Department of Environmental Health Services, September 26, 1989. Letter RE: Site Characterization of Bank of America Property 4359 State Street, Ontario, Calif. San Bernardino County Department of Environmental Health Services, May 4, 1990. Letter RE: Final Site Closure Report for the Property Located at 4359 State Street, Ontario, CA.

San Bernardino County Department of Environmental Health Services, July 19, 1990. Letter RE: Removal of Contaminated Soil from Facility Located at: 4359 State Street, Ontario.

Dames & Moore, August 15, 1994. *Report: Preliminary Environmental Site Assessment –* 4359 State Street, Montclair, California.

The San Bernardino County Fire Department (SBCFD) initially responded to SCS' request indicating that they did not have any files related to the Property. Given the history described in the reports above, however, it was clear that the agency had previous involvement with environmental investigation conducted there. Upon further request, the SBCFD identified the following records (and other notes) listed under the address 4359 State Street, but filed under the incorrect city of Ontario, California:

Dames & Moore, April 8, 1987. Summary of Preliminary Site Reconnaissance: OREO 50053, 4359 State Street, Ontario, California.

Dames & Moore, April 26, 1989. *Final Report: Site Characterization and Remediation, 4359 State Street, Ontario, California.*

Dames & Moore, August 24, 1989. Summary Letter: Additional Site Characterization, Bank of America Property, 4359 State Street, Ontario, California.

San Bernardino County Department of Environmental Health Services, October 19, 1989. *Notice of Condition: Assessor's Parcel No.* 1012151180000.

San Bernardino County Department of Environmental Health Services, November 2, 1989. *Notice of Condition: Assessor's Parcel No.* 1012151180000.

Chemical Consultants, February 14, 1990. Site Assessment: Soil Sampling & Testing, For The Property At 4359 State Street, Ontario, California 92376.

San Bernardino County Department of Environmental Health Services, February 21, 1990. Letter RE: Remedial Action Proposal for Property Located at 4359 State Street, Ontario, CA.

Chemical Consultants, April 18, 1990. Letter RE: 4359 State Street, Ontario, CA.

Chemical Consultants, April 26, 1990. Site Assessment: Soil Sampling & Testing, For The Property At 4359 State Street, Ontario, California 92376.

Rudy's Service Station Equipment Maint., Inc., June 25, 1990. Letter RE: 4359 State Street.

Rudy's Service Station Equipment Maint., Inc., July 16, 1990. *Letter RE: 4363 State Street, Montclair, CA.*

Summary of Previous Reports Reviewed

Copies of the previous reports are included in **Appendix D**. Beginning in early 1987, Dames & Moore (D&M) conducted a preliminary reconnaissance of an area comprising the northwestern portion of the Property, on behalf of Bank of America. At the time of the inspection, the area was developed with six buildings. The initial reconnaissance identified a UST, numerous 55-gallon drums containing muriatic acid and other unspecified liquids, sumps and/or machine pits, the possibility of PCBs in pole-mounted electrical transformers, subsurface pipelines, areas of visibly stained or discolored surface soil, and indications that the facility may have conducted chrome plating of rollbars.

Following the initial reconnaissance, D&M conducted various investigations summarized in its April 26, 1989 report. Drums containing hazardous waste and a gasoline UST (described in the permit as a 3,000-gallon tank, but described in the tank removal report as a 1,000-gallon tank) were removed in May 1988. Two soil samples were collected from beneath the UST and one sample was collected from the excavated soil. One sample from beneath the tank (Sample 2) and the stockpile sample (Sample 3) were analyzed for total fuel hydrocarbons (TFH) using modified EPA Method 8015 and volatile organic compounds (VOCs) using EPA Method 8020. TFH was not detected in either of the soil samples analyzed. Toluene, ethylbenzene, and total xylenes were detected at concentrations between 0.0095 parts per million (ppm) and 0.122 ppm. Based on the analytical information, the SBCFD approved the backfilling of the UST excavation.

In August 1988, D&M conducted additional investigation at areas of stained soil, machine pits, and trenches. Soil samples were collected from stained areas and machine pits and analyzed for TFH, total petroleum hydrocarbons using EPA Method 418.1, and VOCs. Oil-range hydrocarbons were detected at concentrations greater than 5,000 ppm in six soil samples. Very low concentrations of acetone, 2-butanone, 2-hexanone, and toluene (up to 0.230 ppm) were detected in two soil samples. TPH was detected beneath machine pits in Building 2 and 3 at concentrations up to 43,000 ppm. D&M oversaw the excavation and removal of approximately 40 cubic yards of oil-impacted soil from stained surface soil areas. Confirmation sampling showed that TPH concentration left in pace were less than 40 ppm.

In March 1989, D&M conducted an investigation to evaluate the lateral and vertical extent of hydrocarbon-impacted soils beneath the former machine pits in Buildings 2 and 3. Soil samples were collected to depths of 30 feet bgs in two borings. In samples from 10 and 25 feet bgs, TPH was detected at concentrations up to 30 ppm. Toluene, ethylbenzene, and xylene were detected only at boring B2 at concentrations up to 0.032 ppm. Based on the depth to groundwater (approximately 200 to 300 feet bgs), D&M concluded at the TPH and VOCs were not a risk to groundwater. D&M recommended that the machine pits be capped, leaving the soil beneath the pits with TPH up to 43,000 ppm in place.

The San Bernardino County Department of Environmental Health Services (SBCDEHS) September 26, 1989 letter was addressed to BA Properties I, Inc. (Bank of America). It referenced a review of a site characterization report dated April 26, 1989, prepared by D&M for what now constitutes the northwestern portion of the Property (4359 State Street). The county noted two items of concern to the Environmental Public Works Agency: the removal of a UST and elevated concentrations of petroleum hydrocarbons identified in soil beneath two machine pits. The county reportedly oversaw the removal of the UST and gave verbal approval to backfill the excavation based on preliminary findings. The agency reviewed certified analyses and concluded that the "levels of residual contamination in the tank excavation are not sufficient to warrant further investigation or remedial action."

In response to the D&M/Bank of America request to cap two machine pits with concrete, the SBCDEHS granted approval, conditioned on additional sampling at the machine pit area and a deed restriction to ensure that future buyers would be aware of the conditions and allow for remediation to be conducted.

Chemical Consultants (CC) conducted additional site investigation in early 1990 (February 14, 1990 and April 26, 1990). The CC investigations identified more extensive TPH contamination at the former machine pits than was identified by D&M. At Buildings 2 and 3, three borings were advanced to 20 or 25 feet bgs near the former machine pits. TPH was detected at concentrations up to 136,000 milligrams per kilogram (mg/kg), equivalent to ppm, at Building 2, with concentrations at the 20-foot depth up to 80,000 ppm. At Building 3, TPH was detected at a maximum of 2,500 milligrams per kilogram (mg/kg), equivalent to ppm, at the 5-foot depth. TPH was not detected at a concentration greater than 56.7 ppm in the 10- to 25-foot samples. CC recommended further investigation at Building 2 and excavation to remove the TPH-contaminated soil at Building 3. Although not discussed in the narrative, tetrachloroethylene (PCE) was reported in one soil sample (B2N-15') at a concentration of 57 parts per billion (ppb). Not all of the soil samples were analyzed for non-fuel-related VOCs.

CC conducted additional exploratory work at Building 2 using a backhoe and hand auger at the end of December 1989. A total of 26 additional soil samples were submitted for TPH analysis. Based on the results of this investigation, CC described a "plume" of TPH-affected soil extending approximately 12 feet to the southeast and eight feet to the northeast of the former machine pit, with an estimated width of approximately 10 feet. CC recommended excavation of the contaminated soil.

The excavation work at Buildings 2 and 3 was conducted in March and April 1990. An estimated 500 cubic yards was removed. Soil at Building 2 was excavated to a depth of 23 feet bgs. Four confirmation samples were collected from the excavation. A maximum TPH concentration of 375 mg/kg was detected in the confirmation samples. VOCs were not detected in any of the confirmation samples. Soil at Building 3 was excavated to depth of 15 feet bgs. One confirmation sample at this depth indicated a TPH concentration of 26 mg/kg.

Note that stockpiled soil had TPH detected at concentrations up to 8,625 mg/kg, with detections of fuel-related VOCs, 1,1,1-trichloroethane (10 micrograms per kilogram [μ g/kg], trichloroethene (TCE, 16 μ g/kg), and PCE (86 μ g/kg). The excavations were backfilled with "clean, washed gravel."

The May 4, 1990 SBCDEHS letter was addressed to Rudy's Service Station Maintenance, Inc., in response to the closure report dated April 26, 1990 by Chemical Consultants (not provided to SCS for review). The letter indicated that the contaminants associated with the machine pits in Buildings 2 and 3 had been removed to a level where the "Notice of Condition" may be released from the deed. At the time of the letter, the contaminated soil had not yet been removed from the Property. The county requested that this be done by July 8, 1990. Accompanying this letter was a notice that the deed restriction was removed on the same date of the letter. The July 19, 1990 letter confirmed the removal of the contaminated soil to a permitted facility in McKittrick, California, thus fulfilling the SBCDEHS requirements regarding remediation actions.

Dames & Moore Phase I ESA Report

D&M prepared the 1994 Phase I ESA report on behalf of Community Bank. The report addressed the northwestern portion of the current Property only (4359 State Street). At the time of the report, this area was developed with six vacant buildings that had been vandalized and partially occupied by homeless individuals. D&M noted that the commercial structures were erected between 1955 and

1959. Dumas Machine and Tool Company occupied the buildings in 1959. Valley Metal Treating Company became the tenant in 1967. Master Deburring, Chin-Tario Machinery and Equipment, and Comprehensive Sheet Metal were tenants in 1970, 1971, and 1972, respectively. SCSM&E occupied the site from 1976 to 1987, manufacturing truck bumpers and roll bars. D&M reviewed Montclair Fire Department (MFD) files associated with the tenants. A permit was issued in 1982 for a 499-gallon aboveground propane tank. Rudy's Service Station was a tenant in 1987.

As discussed above, several investigations were conducted at 4359 State Street between 1987 and 1990. These reports were summarized in the D&M Phase I ESA report. In 1987, various areas of concern were identified, including stained soil, improper handling of chromium plating solutions or paints, the presence of sumps, pipelines, transformers, and unmarked drums.

D&M noted that, following the completion of remedial action, the redevelopment of 4359 State Street stalled, leaving it vacant. The drive-in theater company reportedly acquired this area around 1994, after which the buildings were demolished.

By 1994, D&M noted no significant evidence of environmental impairment at the area inspected. D&M concluded that due to the extensive testing and agency oversite of past remedial operations, it was unlikely that a significant amount of residual contamination was present. Based on a review of the information available, SCS concurs that the remediation of TPH-impacted soil at the two machine pits and the area beneath the former UST were investigated to the satisfaction of the appropriate regulatory agency. These areas can be considered historical recognized environmental conditions (HRECs). However, the previous investigations do not appear to have investigated the former gasoline tank pump island, potential for historical chrome plating, or the past use of chlorinated solvents. These areas are considered RECs.

Given the reference to past chrome plating operations, the lack of sampling information for chromium is a significant concern (only two soil samples reviewed were analyzed for metals, with no indications of abnormal concentrations). Machine shops and painting operations are commonly associated with the use of solvents, especially chlorinated solvents. Chlorinated solvents were detected in some of the site investigation soil samples with TPH. Since these solvents preferentially mix with hydrocarbons, the PCE and TCE concentrations cannot be usefully compared to current screening levels. Their presence, however, confirms that chlorinated solvents were in use at this area of the Property. The investigations conducted predated regulatory concerns about vapor intrusion from VOCs.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil and/or groundwater contamination, or VOC (volatile organic compound) vapor migration to the Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. SCS researched all known addresses for the Property. Within the City of Montclair, the SBCFD generally acts as the lead enforcement agency for underground storage tank compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency Files

The Property is not a listed site on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix D**).

Santa Ana Regional Water Quality Control Board Files

The Property does not appear in the State Water Resources Control Board's (SWRCB) GeoTracker website. Recent SARWQCB case files, if any, would be listed on this website (**Appendix D**).

Department of Toxic Substances Control Files

The Property does not appear in the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

South Coast Air Quality Management District Files

The Property does not appear as a listed facility on the South Coast Air Quality Management District (AQMD) online Facility INformation Detail (FIND) website (**Appendix D**).

San Bernardino County Fire Department Files

The SBCFD records are discussed in the Previous Environmental Reports section above.

12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR November 14, 2018. A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with

permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to Appendix E for further information on these sites.

PROPERTY LISTINGS

The known Property addresses are not listed in any of the databases searched by EDR.

ADJACENT SITE LISTINGS

Conley's Greenhouse Mrfg & Sales, 4344 Mission Boulevard (cross-gradient to the west) – San Bern. Co. Permit – This listing indicates that the adjoining site to the west is an active small quantity generator of hazardous waste that uses and stores between four and 10 hazardous chemicals. It is listed as an inactive petroleum AST site. This type of listing does not contain information about violations and does not indicate past releases. Based on the available information, this site is not anticipated to have negatively affected the environmental condition of the Property.

Century Auto Body, County Brake and Alignment, D&B Auto Repair, J&H Automotive, TDC Automotive, Roadhaus, JC Auto Electric, Montclair Auto Tech, Miguel's Complete Auto, Ron Mugnaini, Test & Tune Auto Center, Gonzalez Auto Repair, Montclair Auto Center, Lion Transmission, Brewers Automotive, and Chavez Auto Repair, 10602 to 10662 Ramona Avenue (upgradient to the north) – San Bern. Co. Permit, HAZNET, RCRA-SQG, SWEEPS UST, FINDS, ECHO, EMI, and EDR Hist Auto – These current and former tenants at the multi-unit auto center are located across the street and railroad right-ofway to the north-northeast of the Property. They have stored hazardous materials and generated hazardous waste from at least 1987 through today. One tenant was identified as having a UST installed in 1988. No violations were noted and these businesses are not expected to have negatively affected the environmental condition of the Property.

Arco #5652/Arco AM PM #5327/Sater Marwan, 4465 Mission Boulevard (downgradient to the south) – LUST, San Bern. Co. Permit, CHMIRS, and UST – This former service station is situated across the street and downgradient from the Property. According to a review of information on GeoTracker (ID No. T0607199298) a LUST case opened at the site was closed on December 5, 2001. The USTs were removed from the site in 2005, along with some remedial soil excavation. Based on the information reviewed, this site is not anticipated to negatively affect the environmental condition of the Property.

A-1 Lube & Tune, 4481 Mission Boulevard (downgradient to the south) – San Bern. Co. Permit – This site is listed as an inactive handler of special waste as of July 2006. Based on the available information, this site is not anticipated to negatively affect the environmental condition of the Property.

Sal's Auto Care Center, 4421 East Mission Boulevard (downgradient to the south) – San Bern. Co. Permit – This site is listed as an active small quantity hazardous waste generator that useds and stores one to three hazardous chemicals in reportable quantities. Based on the available information, this site is not anticipated to negatively affect the environmental condition of the Property.

Other Database Sites

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**). SCS identified the following site of concern within 0.25 miles of the Property:

- Spiegel Carpet, Drapery, & Furniture, 4299 State Street (approximately 300 feet west of the Property) DRYCLEANERS The Spiegel Carpet facility is listed as an active dry cleaning facility with inactive SCAQMD permits to operate equipment that uses PCE issued in 1982 and gasoline service station dispensing equipment in 1984. The permit allowed up to 320 gallons of PCE use per year. There are no indications of past releases, but the use of chlorinated solvents at dry cleaning facilities is commonly associated with releases to the environment. Based on the distance and the absence of a documented release, this site is not considered a REC. However, if PCE is detected in soil vapor at the northwestern portion of the Property, this site could be considered a potential source.
- CLS Landscape/CLS Landscape Management, 4307 and 4327 State Street (approximately 350 feet west of the Property) San Bern. Co. Permit, SWF/LF, HAZNET, and NPDES This site is listed as a Solid Waste Facilities/Landfill site, but database information indicates it receives and processes up to 200 tons of green waste a day that is hauled offsite to be used as a compost. Materials are not landfilled at the site. It is inspected quarterly and no violations were noted. Based on the nature of the wastes and review of the available documents, no environmental impact to the Property from this site is anticipated.

Other sites located within 0.25 miles of the Property with known releases of hazardous substances such as HWP, LUST, ENVIROSTOR, SEMS-ARCHIVE, and CHMIRS are located cross- or downgradient, or based on case status and/or distance, are not anticipated to negatively affect the environmental condition of the Property.

Several sites located within 0.25 miles appear in databases not typically associated with documented releases, such as San Bern. Co. Permit, EDR Hist Auto, UST, RCRA-LQG, RCRA-SQG, RCRA-TSDF, RCRA NonGen/NLR, SWEEPS UST, CA FID UST, FINDS, ECHO, EMI, AST, HAZNET, NPDES, and CIWQS. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have negatively affected the environmental condition of the Property. Similarly, none of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

Unmappable or Orphan Sites

Five unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

LANDFILLS

According to the EDR-provided review of the California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System, one active landfill was identified approximately 2,000 feet west of the Property. As discussed above, the CLS Landscape Management site is a green waste facility. Based on the available information, it is unlikely that landfills have adversely affected the environmental condition of the Property.

OIL AND GAS WELLS

Available oil and gas well maps from the California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the DOGGR Well Finder online database, the Property is located narrowly inside the south-central edge of the Torrance Oil and Gas Field.

A map showing the location of the Property relative to nearby oil and gas wells is provided in **Appendix D**. No oil and gas wells are located within 0.2 miles of the Property. The nearest oil and gas well was drilled approximately 0.25 miles to the southeast of the Property; its status is listed as plugged. Hundreds of Torrance oil and gas wells were drilled to the north, northeast, and east of the Property, beginning approximately 0.3 miles from the Property. Based on the available information, no significant environmental impacts to the Property are anticipated from oil and gas wells.

NATIONAL PIPELINE MAPPING SYSTEM

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, two hazardous liquid pipelines (Pipeline ID No.: LS-105/108; Watson-Colton 24/20" and LS-120/1; WATSON-Colton 16/20") are located along the northern side of State Street, to the north of the Property. There are no reports of accidents or releases from the pipelines on the website. They store non-highly volatile (HVL) liquid product and are operated by SFPP, LP. Based on the available information, no negative environmental affects to the Property are anticipated from this pipelines.

13 USER PROVIDED INFORMATION

A User Questionnaire was not returned to SCS for inclusion in the report. Howard Industrial Partners provided no information beyond what is discussed above.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. Other than the environmental removed by the SBCFD in July 1990, following the soil remediation, no environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No property valuation information was provided to SCS.

14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY

As discussed above, the available historical information and previous environmental reports reviewed are not sufficient to evaluate the full environmental history at the northwestern, northeastern, and southwestern portions of the Property. These data gaps are considered RECs.

15 DATA GAPS

A data gap represents an inability on the part of the environmental professional to obtain information required by the standards and practices of 40 CFR 312 to fully identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the Property.

The following data gaps were identified:

- SCS did not visually inspect the interior of all of the storage units located at the northwestern portion of the drive-in movie theater parking lot. The insides of a few of the units were visited and the site contacts indicated that they were all rented by swap meet vendors for storage of commercial goods. Based on the available information, this is not considered a significant data gap.
- Limited historical information was identified to document historical activities on the northwestern, northeastern, and southwestern portions of the Property. The absence of complete historical information about these areas of the Property constitutes a significant data gap and is also considered a REC.

16 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

The Property is located on the western side of Ramona Avenue and is bounded to the north by State Street and to the south by Mission Boulevard. It is approximately 27.4 acres and is currently developed primarily with a drive-in theatre with four movie screens and a large asphalt-paved parking lot, which is also used as a swap meet. A two-story office building and a single-story storage building are located at the north-central portion of the Property. A concrete-paved area with the

foundations of former industrial buildings is located at the northwestern corner of the Property. Montclair Tire Company occupies a metal building located on a triangular-shaped area at the northeastern corner of the Property, but is not currently an operating business.

The Property was undeveloped land from 1897 to at least 1903. By 1928, it was developed with agricultural orange groves and two rural residential/farmhouse structures. By 1959, most of the orange groves had been removed and the Property was developed with one large drive-in theater and associated office, storage, and refreshment structures. The southwestern corner of the Property (likely 4356 Mission Boulevard) was developed with one small building and had several trailers stored outside. Two industrial-type structures were added at the northwestern portion of the Property (4359 and 4407 State Street). In 1960, Bevelite Corp. was listed at 4407 State Street. By 1964, the remaining orange groves had been removed and a warehouse-type structure (unknown address) was constructed on the northeastern corner of the Property. In the early 1970s, Gallagher's Garage, F&S Automotive Repair, and PMA Irrigation Equipment Co. were listed at 4356 and 4410 Mission Boulevard (the southwestern portion of the Property).

The drive-in theater was expanded to four screens in the early 1970s, which also resulted in the removal of the southwestern buildings and related trailers. The industrial activities at the northwestern portion of the Property expanded in the late 1970s and 1980s, with at least five industrial buildings. Tenants in these buildings included Dumas Machine and Tool Company, Valley Metal Treating Company, and SCSM&E. By 1989, some of the northwestern industrial buildings had been removed and operations appeared to have ceased. All of the northwestern industrial buildings were removed by 2009.

In general, the historical operations associated with the drive-in theater, which covers most of the Property, are not commonly associated with elevated environmental risk. Historical information reviewed, however, does not provide a complete picture of historical activities at the northwestern, northeastern, and southwestern corners of the Property. According to a previous environmental reports reviewed, known historical operations at the northwestern corner of the Property included metal machining, metal treatment, and manufacture of truck bumpers and roll bars, including chrome plating. A 1,000-gallon gasoline underground storage tank (UST) was reportedly removed from the northwestern portion of the Property in 1989. Further, chlorinated solvents were detected in soils during previous investigations.

Based on a review of the information available, SCS concurs with the findings of previous investigations and remedial action reports that hydrocarbon-impacted soil at two former machine pits located at the northwestern portion of the Property, and the area beneath the former gasoline UST, have been addressed to the satisfaction of the appropriate regulatory agency. These areas are considered historical recognized environmental conditions (HRECs). However, the previous investigations do not appear to have adequately investigated the pump island for former gasoline UST, the potential for historical chrome plating, or the past use of chlorinated solvents. These areas are considered RECs.

The commercial building located at the northeastern corner of the Property, currently occupied by Montclair Tire Company, has existed since at least 1964. At the time of the site visit, more than a dozen trucks were stored outside, but it did not appear to be an operating business. Two manhole covers on the southern side of the building appeared to be associated with a septic system or are otherwise sewer-related. The building has former service bays but does not reportedly have inground hydraulic lifts and was reportedly used as a support warehouse for other Montclair Tire Company facilities in the region. However, no information was available about other former tenants. This data gap is considered significant and constitutes a REC.

An unknown commercial building was located at the southwestern corner of the Property between at least 1959 and 1966. Aerial photos showed that it was gone by 1975, when the drive-in theater was expanded to four theaters. SCS could find no information about the address or type of operation that existed at this portion of the Property. The address would have been approximately 4300-4400 Mission Boulevard (even numbers). The absence of information about this area of the Property constitutes a significant data gap and a REC.

Regulatory agency and database information identified a few known and suspected contamination sites in the area surrounding the Property. With the possible exception of an industrial dry cleaning facility located approximately 300 feet west of the northwestern corner of the Property, based on available information, it is unlikely that any of these sites have affected the environmental condition of the Property directly. The Spiegel Carpet facility operated a tetrachloroethene (PCE) dry cleaning machine from at least 1982 until an unknown date (the permit is listed as inactive). Based on the distance and the absence of a documented release, this site is not considered a REC. However, if during future investigation PCE is detected in soil vapor at the northwestern portion of the Property, this site could be considered a potential source.

In summary, SCS performed a Phase I Environmental Site Assessment of Mission Tiki Drive-In Theatre and related sites located at 10798 Ramona Avenue, Montclair, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed evidence of conditions indicative of recognized environmental conditions in connection with the Property, as discussed above. Additional investigation of soil and soil vapor is recommended.

18 GLOSSARY/DEFINITIONS

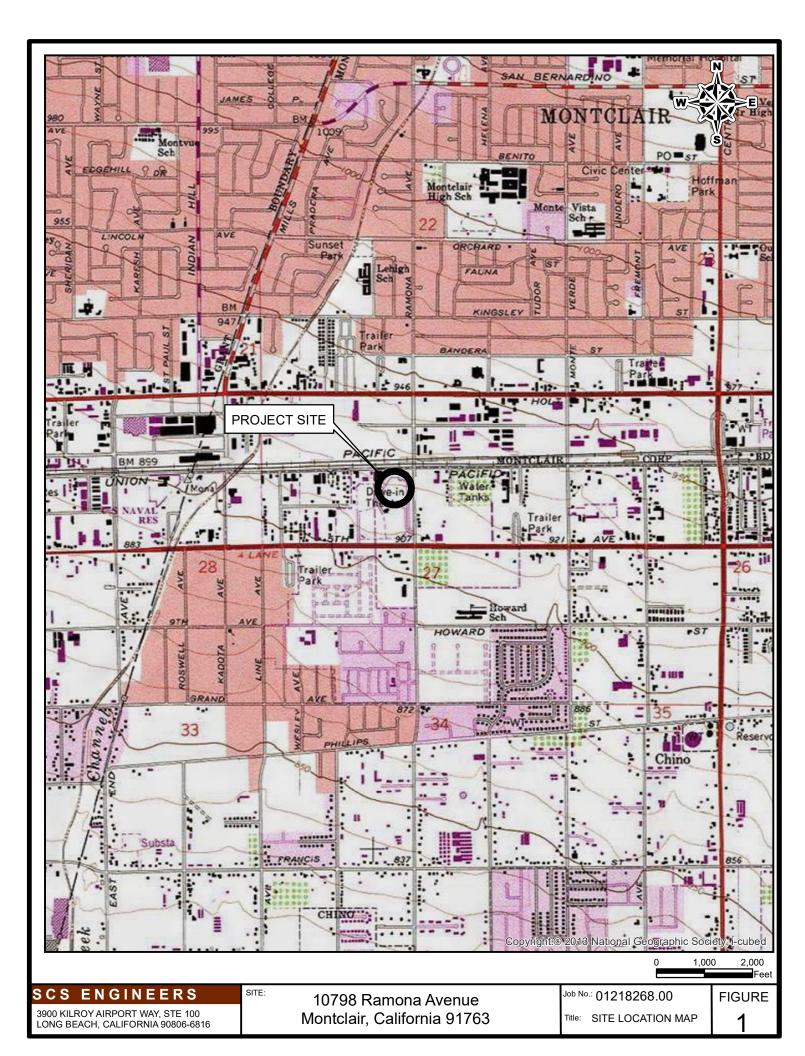

- AAI -- All Appropriate Inquiry
- AUL -- Activity and Use Limitations
- BTEX -- Benzene, toluene, ethylbenzene, and total xylenes
- CERCLA -- Comprehensive, Environmental Response, Compensation, and Liability Act
- <u>CERCLIS</u> -- Comprehensive Environmental Response, Compensation, and Liability Information System
- CFR -- Code of Federal Regulations
- CORRACTS -- Corrective Action Against Responsible Parties at a RCRA site
- <u>CREC</u> A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, or institutional or engineering controls).
- DOGGR -- Department of Oil, Gas, and Geothermal Resources
- <u>De Minimis Condition</u> -- A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs or CRECs.
- DTSC -- California EPA Department of Toxic Substances Control
- EDR -- Environmental Data Resources, Inc.
- <u>EPA</u> -- Environmental Protection Agency
- ERNS -- Emergency Response Notification System
- ESA -- Environmental Site Assessment
- FINDS -- Facility Index System
- HAZNET -- California EPA Hazardous Waste Facility and Manifest Data
- <u>HREC</u> Historical Recognized Environmental Condition: A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls

- LQG -- Large Quantity Hazardous Waste Generator
- LUST -- Leaking Underground Storage Tank
- MCL -- Maximum contaminant level
- MTBE -- Methyl-tert-butyl-ether
- NFA -- No Further Action determination
- NFRAP -- No Further Remedial Action Planned
- NPL -- National Priority List (Superfund)
- PAHs -- Polynuclear aromatic hydrocarbons
- PCBs -- Polychlorinated biphenyls
- RCRA -- Resource Conservation and Recovery Act
- **RCRIS** -- Resource Conservation and Recovery Information System
- <u>REC</u> Recognized environmental condition is defined by ASTM E 1527-13 as: "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis conditions* are not recognized environmental conditions."
- ROD -- Record of Decision
- RBSLs -- Risk-based Screening Levels
- RSLs Regional Screening Levels
- <u>RWQCB</u> -- Regional Water Quality Control Board
- SARA -- Superfund Amendments and Reauthorization Act
- SLIC -- Spills, Leaks, Investigations, and Cleanups database
- SQG -- Small Quantity Hazardous Waste Generator
- SWIS -- Solid Waste Information System
- SWLF -- Solid Waste Facility/Landfills
- <u>TPH</u> -- Total Petroleum Hydrocarbons
- TRIS -- Toxic Release Inventory System
- TSD -- Treatment, Storage, and/or Disposal Facility

- <u>User</u> -- The person or persons seeking to establish the innocent landowner defense, bona fide prospective purchaser liability protection, and/or contiguous property owner liability protection pursuant to CERCLA sections 101 and 107.
- USGS -- United States Geologic Survey
- UST -- Underground Storage Tank
- VCP -- Voluntary Cleanup Program
- VOCs -- Volatile organic compounds

As a follow up to our conversation this morning, there is a tentative agreement with the owners of the Mission Drive-in that would waive their sewer connection fees. The City will need to acquire right-of-way from them for the Ramona Avenue Grade Separation project, and possibly for future work at the Mission Boulevard/Ramona Avenue intersection. It would be the City's intent to apply these fees to the purchase of the right-of-way at some point in the future.

It is my understanding based on a telephone conversation with Ralph Nardoni, associated with the drive-in, that these fees are \$37,850.11. I would like to get a breakdown of these fees. If your permit cost for inspection is part of this fee, that portion is not being waived. They will have to have the permit and the inspection that goes along with it. The only fees that we are waiving at this time are any reimbursement costs and Inland Empire Utilities Agency fees.

If you have any questions, please let me know.

### **EXECUTIVE SUMMARY**

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### **RECORD SOURCES**

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

### **RESEARCH SUMMARY**

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

#### Certified Sanborn Results: Certification # FAA3-40C2-962C PO# NA 01218268.00 Project

#### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results Certification #: FAA3-40C2-962C

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

The Department has received a site characterization report dated April 26, 1989 prepared by Dames and Moore for the subject location. Within the document there are two items noted which are of concern to the Department. These items include the removal of the underground storage tank and the elevated concentrations of petroleum hydrocarbons identified in the soil beneath the two machine pits.

With respect to the removal of the underground storage tank, the Department issued verbal approval to backfill the excavation based on preliminary findings. Written approval was to be issued upon receipt of the certified analysis. The Department has reviewed the analyses and they indicate that the levels of residual contamination in the tank excavation are not sufficient to warrant further investigation or remedial action.

With respect to the two machine pits, the Bank of America has requested that they be allowed to cap these areas with concrete until which time the property use will allow remedial measures to proceed without causing damage to structures.

The Department approved the proponents request provided the following conditions were met:

 Additional sampling and analysis were to be performed to assure no other hazardous substances which may be associated with a discharge of this type were present,

En alter En alter Alter Alter State Alter 26 ° 26 ° 24 °

BA Properties I, Inc Page 2 Sept 26, 1959

- Notice was to be placed in the deed to assure all prospective buyers are aware of the conditions of the site and conditions of the approval and
- 3. At such time, when the property use changes to allow for the mitigation of this contamination and/or impacts this contamination in a way that would accelerate migration, the Department would require remedial action.

The Department has received the additional analysis requested, and they do <u>not</u> indicate the presence of hazardous substances in excess of what may be found to occur naturally. Therefore, the Department approves your request and you may proceed with the installation of the concrete caps. This office shall proceed with the placement of notice in the deed.

It is important to note that with the exception of the sampling pursuant to the underground tank removal and the additional sampling required pursuant to your request, the Department did not require nor was it present during the other activities described in this report. It is <u>not</u> the Department's responsibility or intent to comment on the adequacy of these other activities or indemnify this property or it's owners in any way.

If you-have any questions please call (714) 387-3044.

RE: Escrow #94-20118-MM 4359 State Street Montclair, CA

Dear Jack:

Enclosed please find the Phase I Environmental Site Assessment on the above referenced property. Pursuant to paragraph 3.1 of the Agreement for Purchase and Sale and Escrow Instructions (the "Agreement") dated July 11, 1994, you have until August 28, 1994 to approve or disapprove this report. Since this date is a Sunday, I hereby grant you an extension until Monday, August 29, 1994.

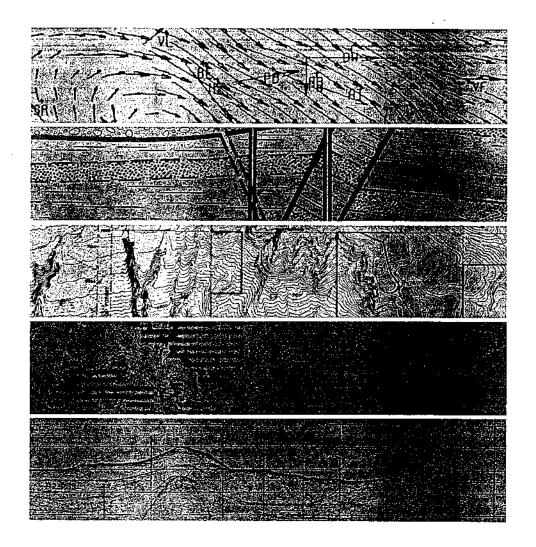

Upon receipt on August 18, 1994 of the Phase I report, your review period commences pursuant to paragraph 3.2 of the Agreement. This period expires on September 17, 1994. Again, since this date is a Saturday, I hereby grant you an extension until Monday, September 19, 1994.

If I can be of further assistance to you, please feel free to contact me at 818-568-2124.

Very truly yours, 1.1 and the second

> Transmittal of Report Preliminary Environmental Site Assessment 4359 State Street Montclair, California <u>For Community Bank</u>

Dear Mr. Saunders:

Dames & Moore is pleased to submit two copies of this report for the Preliminary Environmental Site Assessment at 4359 State Street in Montclair, California for Community Bank.

We trust this report meets your current needs. We are available at your convenience to answer any questions you may have or to provide any required clarification to our report. If we can be of further assistance, please contact the undersigned at (909) 980-4000.

Sincerely,

DAMES & MOORE, INC.

### REPORT PRELIMINARY SITE ASSESSMENT 4359 STATE STREET MONTCLAIR, CALIFORNIA FOR COMMUNITY BANK

### 1.0 INTRODUCTION

The purpose of this report is to summarize and present the findings of Dames & Moore's Preliminary Environmental Site Assessment (ESA) of 4359 State Street which is located in Montclair, California (Figure 1). The property is located in a commercial/industrial area approximately 600 feet west of Ramona Avenue. The lot is rectangular in shape and is approximately 415 feet by 200 feet in size. This assessment was performed at the request of Community Bank.

Dames & Moore's previous experience with this site includes conducting a Preliminary Environmental Site Assessment (ESA) in 1987, characterization of contamination beneath two machine pits in 1988, and the removal of one 1000 gallon underground storage tank (UST) in 1988 (Figure 2).

### 2.0 PURPOSE AND SCOPE OF WORK

Phase I Environmental Site Assessments are performed to evaluate the potential presence of environmental contamination which may have resulted from operations on the subject property or on nearby properties. These assessments are typically accomplished by a site reconnaissance, review of readily available documentation of land use history for evidence of the use, storage and/or disposal of hazardous substances, and review of readily available regulatory information.

The assessment of this site was conducted in accordance with the Scope of Services authorized by Community Bank. A copy of the Scope of Services is provided in Appendix A.

The Dames & Moore Scope of Services for this site specifically excludes an assessment of the potential presence of asbestos containing building materials, radon gas, and naturally occurring radioactive materials. In addition, the Scope of Services does not include the collection and analysis of other environmental samples.

### 3.0 PHYSICAL SETTING

A summary of the generalized physiographical, geological, and hydrogeological settings, based upon a review of readily available published information, is provided in the following subsections.

### 3.1 PHYSIOGRAPHY

According to a 1981 7.5 minute topographic map of the vicinity provided by the U.S. Geological Survey (USGS), the subject site is located in the Ontario Quadrangle in Township 1 South. Range 8 West, Section 27 at approximately 920 feet above mean sea level. The surrounding area has a southwesterly sloping gradient of approximately 80 feet per mile (USGS, 1967, Photorevised, 1981).

### 3.2 GEOLOGY AND HYDROGEOLOGY

The site is located in the western portion of the Chino Basin, one of four major sub-basins in the Upper Santa Ana Valley hydrogeologic basin. The Chino Basin is a low relief alluvial plain encompassing approximately 300 square miles in the central and western portion of the Upper Santa Ana River Valley (California Department of Water Resources, 1959).

The water bearing sediments in the Chino Basin are divided into younger and older alluvium (Dutcher and Garrett, 1963). The younger alluvium consists primarily of gravel, sand, silt, and clay (Dutcher and Garrett, 1963).

The older alluvium provides the majority of groundwater in the Chino Basin and is composed primarily of interbedded deposits of gravel, sand, silt and clay with variable amounts of cobbles and boulders. The older alluvium can be subdivided into finer alluvial-fan deposits and coarser fluvial deposits which grade from one to another through a series of overlapping wedge-shaped layers (Geotechnical Consultants, Inc., 1980).

Groundwater in the Chino Basin generally occurs as an unconfined aquifer located several hundred feet below ground surface (bgs). An exception to this is in the far west portion of the Chino Basin, adjacent to Puente Hills and Chino Fault, here semi-confined groundwater conditions exist (Metcalf and Eddy: L.D. King, 1981). Groundwater flow in the western portion in the Chino Basin is principally toward the south-southeast with local variations in flow direction.

19050-006-128 State, ESA

2

Two groundwater wells with water elevation data are located approximately one mile from the site. Based on a review of this information, depth to groundwater in the site area is inferred to be greater than 300 feet bgs with a gradient to the south-southeast (Carson and Matti, 1985).

### 4.0 HISTORICAL LAND USE

Dames & Moore reviewed selected historical aerial photographs, building and safety permits, and archival topographic maps and previous Dames & Moore reports on the site for historical information of the site and surrounding area. These references were reviewed for evidence of activities which would suggest the potential presence of hazardous substances at the site and to evaluate the potential for the site to be impacted by off-site sources of contamination. Attempts were also made to view historical Sanborn Maps, however, no maps for this area could be located. A summary of the site vicinity's historical land use as interpreted from these sources is presented below:

A 1938 aerial photo depicts the site and surrounding area to be completely encompassed by tree groves. It is impossible to ascertain the types of trees from the photograph. Southern Pacific railroad tracks appear directly north of the site. A farmhouse and other farm-related buildings were observed to the southeast of the property near Ramona Avenue.

A 1955 aerial photo indicates that the site still remains undeveloped. A drive-in theatre has been constructed just south of the subject property. The area west of Pipeline Avenue has been graded and developed with what appears to be scattered commercial buildings.

Between 1955 and 1959, commercial structures were erected onsite. According to the City of Montclair Fire Department (Dames & Moore, Final Report, Site Characterization and Remediation, 1989), Dumas Machine and Tool Company occupied the property commencing in 1959. No tenant was recorded between 1965 and 1967. Valley Metal Treating Company became the site tenant in 1967. For a complete listing of previous tenants, see Table 1.

By 1969, the surrounding area had become increasingly industrial. Several buildings are indicated on the subject property. A 1969 aerial photograph depicts many small, unidentifiable objects scattered on a central lot between the site buildings.

Between 1969 and 1972, Building 2 was erected on the west side of the property as it is observed in a 1972 aerial photograph (Figure 2). Additionally, the drive-in theater to the south has now expanded into a four-screen complex.

19050-006-128 State.ESA

(-)

(1,2)

-

(2, 4)

1.7.25

SCSM & E occupied the site from 1976 to 1987. The company manufactured truck bumpers and roll bars. According to the Montclair Fire Department, a permit was issued to SCSM & E in 1982 for a 499 gallon above ground propane tank (Appendix B). This tank was located off the northeast corner of Building 4 (Figure 2). No records were observed to indicate how long the propane tank was in use.

Between 1987 and 1990, no significant change from 1987 was observed but, numerous investigative and remedial actions were performed on the subject site. Initially, Dames & Moore conducted a Preliminary Site Reconnaissance of the subject property (Dames & Moore, Preliminary Site Reconnaissance Report 1987). The findings indicated various areas of concern which included stained soil, lack of surrounding vegetation, the possibility of improper handling of chromium plating solutions or paints, and the presence of sumps, pipelines, transformers and unmarked drums. Numerous recommendations were made, including drum, sump and soil sampling.

In July 1987, Dames and Moore issued a report summarizing, among other items, sump and drum sampling results (Dames & Moore, Supplemental Site Investigation Report, 1987). Twenty-six drums and two sumps were sampled. Five drums were found to contain an unidentified corrosive or ignitable waste. Fifteen drums and two sumps contained unidentified oils. The six remaining drums contained an aqueous oil mixture. These drums were subsequently removed from the subject property and transferred to a state licensed disposal facility (Dames & Moore report, 1989).

In May 1988, Dames & Moore excavated and removed a 1000-gallon UST under the auspices of San Bernardino Department of Environmental Health Service (SBDEHS) officials (Dames & Moore, Final Report, Site Characterization and Remediation Report, 1989). Further soil analysis was performed and the SBDEHS determined that the residual contaminants found were not sufficient to warrant further investigation or remedial action with regards to the UST (Appendix B). The excavated area was then backfilled.

In early 1989, Dames & Moore conducted analytical testing of the stained soil located where the 55 gallon drums were previously stored as well as in two of the machine pit areas (Figure 2). Sample results of the stained soil indicated the presence of heavy-end hydrocarbons in concentrations greater than 5000 parts per million (ppm). Volatile organic compounds were also detected. Machine pit samples indicated the presence of total petroleum hydrocarbons in levels ranging from not detect to 43,000 ppm in boring depths up to 25 feet. Subsequently, Chemical Consultants performed a remediation of the two contaminated machine pit areas as well as the stained soil in April of 1990. The machine pit in Building 2 and the machine pit in Building 3

19050-006-128 State.ESA

1

-

were excavated to 23 feet and 15 feet respectively. The soil was stockpiled in an unspecified location on the site until proper disposal arrangements could be made (Chemical Consultants, Site Assessment, 1990). This soil was removed by July of 1990 as stated in a letter dated 7-19-90 from SBDEHS acknowledging the receipt of the disposal manifests. At this time, the "Notice of Condition", which had been placed on the property at the time the contamination was discovered, was removed (Appendix B).

Upon completion of all remedial action, Mr. Rudy Argandona began making improvements to the property. Shortly thereafter, the renovations ceased and Mr. Argandona abandon his investment in the property (City of Montclair, Department of Building and Safety, personal communication, 1994). The site has since been vacant.

### 5.0 PRESENT CONDITIONS

Dames & Moore conducted a reconnaissance of the site and, to the extent that is was accessible, a "drive-by" survey of the site vicinity on July 27, 1994, to observe and document the present site conditions and the nature of neighboring property development. The following subsections present a summary of the conditions observed and the information obtained.

### 5.1 ONSITE

The subject site is a rectangular lot which is approximately 415 feet by 200 feet. The property consists of 6 vacant buildings and at the time of the assessment, the property had been fenced off and locked (Figure 2), however, it appeared that vandals had entered the property and stolen all of the electrical wiring and other facility items.

Two of the buildings on the property, Building 1 and Building 6 (Figure 2), were constructed of brick with wood framed interior walls. Buildings 2, 3, 4, and 5 are steel framed structures with metal siding. All structures located on the facility have concrete floors. A fire suppression system has been installed throughout the property with the one main control valve located off the northeast corner of Building 2 and the other main control valve located off the northwest corner of Building 6 (Figure 2). The trenches dug for this system have been backfilled but not resurfaced. The following is a detailed description of observations made in each building.

### **BUILDING 1**

Building 1 is located on the west side of the property. This structure sustained heavy damage due to the vandals. All electrical wiring, as well as much of the plumbing, has been stolen. Previous reports indicate that three transformers were located off the northwest corner of this building. At the time of the site inspection, these transformers were no longer present. Several unsuccessful attempts were made to contact Southern California Edison regarding the status of these transformers. Due to the extent and nature of the vandalism, it appears that these transformers were also stolen. No staining was observed in this area and no evidence of contamination due to their removal was found.

An empty 55 gallon drum of sulfuric acid was observed in Building 1 along the east side (Appendix C). No evidence of staining around the drum was observed. Also located in one of the offices was a small square excavation approximately 2 feet deep (Appendix C). The purpose of this excavation is unknown, however, no stained soil or evidence of environmental impacts were observed.

### **BUILDING 2**

Two machine pits were located in the southern portion of Building 2. The smaller pit had been capped while the larger one, which is where the remediation occurred, has been backfilled with gravel. A minor surface stain was observed in the large machine pit, however, a closer inspection revealed that the stain only propagated down approximately one inch. The likelihood of this stain significantly impacting the subject site is minimal. In the northwest corner of Building 2 is the former location of the electrical switchbox and meters. This equipment appears to have been stolen. A paint can was observed outside the north side of Building 2. No staining was observed in this area.

### BUILDING 3

Building 3 is located in the center of the property along the south side (Figure 2). This structure contains two machine pits. One has been capped and the other, where the remediation took place (Figure 2), had been backfilled with gravel. A small surface stain was observed on the gravel. A closer investigation revealed that the stain only propagated down two to three inches. No evidence was observed to indicate a significant environmental impact with regards to this stain. Previously mounted on the south side of the building was a set of electrical meters. These meters appear to have been stolen.

### **BUILDING 4**

With the exception of a swamp cooler mounted approximately 10 feet above ground level, this building was empty. No staining or other environmental concerns were observed inside this structure. A 499 gallon propane tank was previously located directly east of the northeast corner of this building according to the Montclair Fire Department (Appendix B). A large stain was observed on the concrete in this area. The concrete appeared to be in good condition and no evidence was found to suggest that the material propagated through the concrete into the underlying soil.

### BUILDING 5

Building 5 is located in the southeast corner of the property (Figure 2). Evidence of construction was observed within the building. In the northeast corner is a small two story structure. The upper level is an office which contained a large amount of trash. The lower level is a bathroom in which two excavations had been made. According to Mr. Rick Sanders, a Community Bank representative, Mr. Argandona, the previous tenant, began renovation of the facility. No stained soil or evidence of environmental impairment was observed in this area.

### **BUILDING 6**

An approximately 25 gallon chemical container was observed located on the east side of this structure (Figure 2). The container was empty and no staining of the floor around the container was observed. No indications of significant environmental impairment of the subject site due to this container were found at the time of the assessment.

### ADDITIONAL OBSERVATIONS

Along the north side of the property an access ramp appears to have been removed (Figure 2). In conversations with Mr. Sanders, he asserted that this ramp was removed to deter vandals from entering the property. To the west of where the ramp was located, a small oil stain was observed outside the brick fence that lines the north side of the facility. The concrete in this area was in good condition and no evidence was observed to suggest contamination of the underlying soil.

The northeast corner of the facility contains a partially asphalted area which is the former location of the UST (Figure 2). No indications of significant residual contamination were found in this area. Previous reports indicate that a subsurface drainage vault was located off the

northwest corner of Building 6 (Figure 2). At the time of the site assessment, the vault had been filled with dirt and large pieces of asphalt (Appendix C). A telephone pole equipped with two transformers lies off the northeast corner of the subject property. Attempts were made to contact Southern California Edison (SCE) regarding the possibility of these transformers containing PCB's, however, at the time this report was submitted, SCE representatives had not responded to our request for information. No visual signs of leakage or significant environmental impairment of the site due to these transformers was observed.

Three pipes were observed on the property. One approximately 8" diameter pipe was found between Buildings 5 and 6. The pipe did not appear to be connected to anything and was sitting on grade. A second similar horizontal pipe was observed south of Building 3 (Figure 2) but one end of this pipe appeared to be recently buried and it was unable to be determined whether or not this pipe was connected. A third smaller but vertical pipe was found located behind Building 5 (Figure 2). This appeared to a former light pole due to the conduit located near the base of the pole. No wiring or bulb was present. No evidence was observed to suggest that any of the pole or pipes has had a significant adverse impact on the subject site.

To the east of Buildings 5 and 6 is a narrow dirt area which was overgrown with weeds and contained a great deal of trash. The weeds made this area impassible and Dames & Moore personnel were unable to perform a detailed inspection of this area. A limited observation revealed no evidence of adverse conditions in this area.

### 5.2 SITE VICINITY

1.11

The subject site is located in a commercial/industrial area of Montclair. To the north of the facility across State Street is the Southern Pacific Railroad line. It runs in an east-west direction. The adjacent property to the west contains several industrial companies. A machine shop and a grinding company are located in this area. No evidence was observed to suggest environmental impairment of the subject site from these facilities. The property to the east is an indoor swap meet, to the south is a drive-in theater, and near the southwest corner a residence was observed. In general, the risk of contamination associated with these types of facilities is minimal. No evidence was observed to suggest any environmental impact of the subject site due to these operations.

### 6.0 AGENCY DATA REVIEW

Federal and state governments have developed legislation within the past 15 years which relate to environmental issues. As a result of this legislation, regulations which govern wastes and materials, and the storage, handling, control and disposal of such materials have been promulgated. Numerous agencies collect and disseminate information for use in evaluating potential environmental problems. The information presented on agency lists are periodically updated, and Dames & Moore attempted to secure the most recent lists for review. To secure this information, Dames & Moore obtained a report from Vista Environmental Services (Vista). A copy of the Vista report is provided in Appendix D.

For this report, Vista reviewed information provided by a variety of federal, state, and local regulatory agencies to assess the potential for environmental impairment at the subject property. Vista reviewed the following agency lists of known or potential hazardous waste sites or sites under investigation for hazardous substances/environmental violations for the subject property and for nearby properties.

- U.S. Environmental Protection Agency (USEPA) List of Proposed and Final National Priority Sites List (NPL), dated January 1994;
- U.S. Environmental Protection Agency, Resource Conservation and Recovery Act (RCRA), RCRIS List, dated July, 1993;
- U.S. Environmental Protection Agency, Resource Conservation and Recovery Act (RCRA) Correction Action Sites List, dated September, 1993;
- California Environmental Protection Agency (Cal-EPA), Calsites Database, Annual Work Plan List, dated November 1993;
- California Environmental Protection Agency, Calsites Database, ASPIS List, dated November, 1993;
- U.S. Environmental Protection Agency, CERCLIS List, dated January, 1994;
- California Environmental Protection Agency, CA CERCLIS, dated November, 1993;
- California Environmental Protection Agency, Lust Information System (LUSTIS), dated December, 1993;

19050-006-128 State.ESA

1.56-311

- California Regional Water Quality Control Board (CRWQCB), Santa Ana River Underground Tank Tracking System, October, 1993;
- California Integrated Waste Management Board, Solid Waste Information System (SWIS), dated March, 1993;
- San Bernardino County Solid Waste Management Department, Private and County Owned Landfills, dated January, 1993;
- California Department of Health Services, Deed Restriction Properties Report, dated July, 1993;
- California Environmental Protection Agency, Cortese List, dated November, 1992;
- California Water Quality Control Board, Toxic Pits Cleanup Facilities, dated August, 1993;
- Emergency Planning and Community Right-to-Know, TRIS list, dated August 1993;
- California State Regional Water Quality Control Board, Aboveground Storage Tank Database, dated September, 1993;
- California State Regional Water Quality Control Board, Underground Storage Tank Registrations Database, dated January, 1994;
- U.S. Environmental Protection Agency, Emergency Response Notification System (ERNS) List, dated September, 1993; and,
- U.S. Environmental Protection Agency, Resource Conservation and Recovery Act, Hazardous Waste Generator List, Dated July, 1993.

Dames & Moore also contacted the San Bernardino County, Department of Environmental Health Services (SBCDEHS), City of Montclair Fire Department, California Regional Water Quality Control Board - Santa Ana Region (CRWQCB) and Cal-EPA Department of Toxic Substances Control regarding the status of any investigations or enforcement actions at the subject property. Building permits on file for the subject property at City Hall were also reviewed.

### 6.1 ONSITE

A Dames & Moore representative conducted an agency visit to SBDEHS on August 10, 1994. Site files were reviewed. File information pertained primarily to those issues discussed in Section 4.0. SBDEHS actions not related to items contained in Section 4.0 were not found.

On August 3, 1994, Cal-EPA and City of Montclair Fire Department indicated that no files on the subject site were found.

No response from CRWQCB has been received to date. Should pertinent information be received by Dames & Moore at a later date, it will be forwarded in a separate addendum.

### 6.2 OFFSITE

The information obtained from Vista identified known or potential soil/groundwater contamination, and/or the presence of USTs at several sites in the vicinity of the subject property. This information indicated that:

- One site is identified on the Cortese list within one mile of the subject property.
- One site is identified on the CERCLIS list within one mile of the subject property.
- One site is identified on the Calsites AWB list within one mile of the subject site.
- One site is identified on the LUST list within one mile of the subject site.
- Six sites are identified on the UST/aboveground storage tank list within one mile of the subject property.
- Six sites are identified on the Calsites ASPIS list within one mile of the subject site.
- One site is identified on the RCRA Small Generator list within one mile of the subject property.

Please note that individual sites may be identified on more than one list. As a result, the total number of sites tabulated by the lists may be greater than the total number of different sites actually present (Appendix C).

A summary of the facilities identified in the Vista database is as follows:

- Facility: Shacklett Construction Co.
   Distance & Direction: 0.05 miles to the west
   Summary: This facility is licensed to operate four UST by the CRWQCB.
   Tank details regarding size, contents, age, etc. were not indicated.
- Facility: Spiegel Cleaners
   Distance & Direction: 0.05 miles to the west
   Summary: This facility is identified on the RCRA Small Generator list. No
   other information was indicated.
- Facility: C.W. Smith
   Distance & Direction: 0.20 miles to the east
   Summary: This facility is licensed to operate one UST by the CRWQCB.
   Tank details regarding size, contents, age, etc. were not indicated.

# Facility: Triko Metals Distance & Direction: 0.22 miles to the east Summary: This facility is identified on the Calsites - ASPIS list as "not an NPL site - no further action".

• Facility: Tri-Alloy Distance & Direction: 0.22 miles to the east

> Summary: This facility is licensed to operate four USTs by the CRWQCB. Two 950 gallon steel fuel USTs were reported as "closed removed". Two 12,000 gallon steel diesel fuel tanks are designated as "active/in service".

Facility: AA Equipment Rentals

Distance & Direction: 0.23 miles to the east

Summary: This facility is licensed to operate two USTs by the CRWQCB. One 2000 gallon fiberglass diesel fuel UST and one 10,000 gallon fiberglass unleaded gas UST were designated as "active/in service".

• Facility: Midway Building Materials

Distance & Direction: 0.34 miles to the northeast

Summary: This facility appears on the LUST list. A gasoline leak into soil was reported on 10/30/90 and at another unknown date. The CRWQCB remedial status designation for both events is "preliminary assessment".

• Facility: Kwik Kleen, Inc

Distance & Direction: 0.38 miles to the east

Summary: This facility appeared on the Cal-CERCLIS and USEPA-CERCLIS lists. USTs involving the use of solvents is indicated. Cal-EPA designated the property as a "Notice 103(c) site - reassessed PA". USEPA conducted a preliminary assessment which was completed in 2/88 and listed the site as "no further remedial action planned".

Facility: Montclair Bronze, Inc.
 Distance & Direction: 0.23 miles to the northwest
 Summary: This facility is identified on the Calsites - ASPIS list as "not an NPL site - no further action".

Facility: Die-Mold Plating Co
 Distance & Direction: 0.24 miles to the northwest
 Summary: This facility is identified on the Calsites - ASPIS list as "not an
 NPL site - no further action".

Facility: Allis Chalmers Repair Shop
 Distance & Direction: 0.24 miles to the northwest
 Summary: This facility is licensed to operate one UST by the CRWQCB.
 The contents of the tank is identified as "oil (not specified)" and
 the tank status is listed as "active/in service". No further
 information was indicated.

Facility: Lazy Daze Inc Distance & Direction: 0.25 miles to the south Summary: This facility is licensed to operate one UST by the CRWQCB. The 4000 gallon unleaded gas steel tank is designated as "closed/removed".

Facility: Genes Automotive Paint
 Distance & Direction: 0.28 miles to the west
 Summary: This facility is identified on the Calsites - ASPIS list as "not an
 NPL site/preliminary assessment required-medium priority".
 Reported pollutants include paint sludge and pesticide containers
 larger than 30 gallons.

 Facility: Quaker Chemical Corporation
 Distance & Direction: 0.43 miles to the west
 Summary: This facility is identified on the Calsites - ASPIS list as "not an
 NPL site - no further action".

 Facility: B.R. Dodson Oil Company Distance & Direction: 0.71 miles to the east Summary: This facility is identified on the Calsites - ASPIS list as "not an NPL site - no further action".

Of the facilities listed above, only one is considered to be a potential environmental risk to the subject property. Shacklett Construction Company operates four UST's 0.05 miles to the west of the subject property, however, no reports of leaks from these tanks were found. The complete Vista database report is located in Appendix D.

### 7.0 CONCLUSIONS

Dames & Moore has performed a Phase I Environmental Site Assessment in conformance with the Scope of Services authorized by Community Bank for 4359 State Street, in Ontario, California. The subject property contains six buildings and the site is currently vacant.

Numerous assessments and remediation activities have been performed on the subject site including removal of waste oil drums, excavation of two machine pits to remove contaminated soil, and the removal of an UST. In all cases, the projects were overseen by the San Bernardino Department of Environmental Health Services (SBDEHS). A review of correspondence between the previous tenant, Mr. Rudy Argandona, and the SBDEHS indicates that all remedial action was performed to the satisfaction of the SBDEHS and that no further action in association with these areas is necessary. Due to the extensive testing and agency oversite of these operations, it is unlikely that a significant amount of residual contamination is present.

19050-006-128 State:ESA

All Address Address

Two large stains were observed on the concrete where the 499 gallon propane tank was located and on the north side of the brick wall just west of where the ramp was removed (Figure 2). The concrete in both areas appeared to be in good condition and no evidence was observed to indicate the propagation of these contaminants into the soil.

Agency database review indicates that four UST's are located 0.05 mile west of the subject property. Since groundwater flow in the area is to the south-southeast, if a spill were to occur, it is possible the contamination may migrate to the subject property. At this time, no evidence was found to suggest any contamination of the subject property has occurred due to these tanks.

No evidence of significant environmental impacts of the subject property were observed during this site assessment. It is Dames & Moore's opinion that no further investigative actions with regards to this property are warranted at this time.

### 8.0 LIMITATIONS

The conclusions presented in this report are professional opinions based solely upon the visual observations of the site and vicinity during a single visit, and our interpretation of the available historical information and documents reviewed, as described in this report. They are intended exclusively for the purpose outlined herein, and for the site location and project indicated.

This report is intended for the sole use of Community Bank. The use or re-use of this document or the findings, conclusions, or recommendations presented herein, by any other party or parties is at the sole risk of said user.

It should be recognized that this study was not intended to be a definitive investigation of contamination at the subject property. This assessment was limited to the Scope of Services described herein and did not include exploratory borings, and soil/water sampling and analytical testing.

The services performed by Dames & Moore were conducted in a manner consistent with that of the care and skill ordinarily exercised by members of the same profession currently practicing in the same locality under the same conditions. It is important to recognize that even the most comprehensive Scope of Services may fail to detect environmental liabilities on a particular site. Therefore, Dames & Moore cannot act as insurers and cannot "certify" that a site is free of environmental contamination. No expressed or implied representation or warranty is included or intended in our reports except that our services were performed, within the limits prescribed by the Scope of Services, with the customary thoroughness and competence of our profession.

19050-006-128 State.ESA

1.2

Opinions and recommendations presented herein apply to the existing and reasonable foreseeable site conditions at the time of our investigation. They cannot necessarily apply to site changes of which this office is unaware and has not had the opportunity to review. Changes in the conditions of this property may occur with time due to natural processes or works of man on the subject property or on adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond our control.

\_

### APPENDIX A

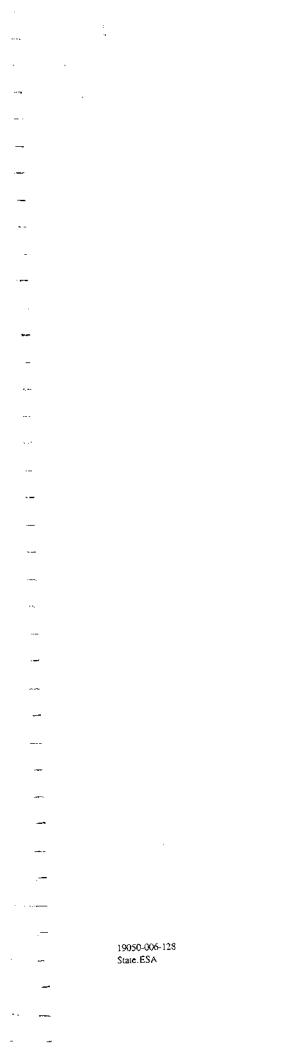

## Scope of Services

The scope of services for this Environmental Site Assessment included:

- Reviewing pertinent, available documents and maps regarding local physiographic and hydrogeologic conditions in the site vicinity (studies to specifically identify faults in the site vicinity are not included);
- Reviewing and interpreting available historical aerial photographs of the site and vicinity from the Whittier College Fairchild Collection and/or other aerial photograph sources;
- Reviewing and interpreting Dames & Moore's archival topographic maps, and readily available historical land-use maps of the site and the area within a 1/4-mile radius of the subject property for information regarding historical land use potentially involving the manufacture, generation, use, storage and/or disposal of hazardous substances;
- Reviewing available documents regarding past and/or current site development provided by Al Shankle Construction Company along with our formal authorization to proceed; the estimate presented included an allowance of four hours for this document review;
- Performing a reconnaissance survey of the subject property to make visual observations of existing site conditions and activities, and a drive-by survey of the area within a 1/4-mile radius of the site to observe types of general land use within the search area. It is important that Dames & Moore have access to all portions of the subject property, including roof(s), storage area(s), and basement(s), if applicable. It was the responsibility of Al Shankle Construction Company to obtain the owner's and/or tenants' permission to enter the site prior to our visit;
- Conducting interviews with owners of the subject property, property manager(s), tenants, maintenance personnel, or others, as available or appropriate, to evaluate the site history, and operation and maintenance procedures. It was the responsibility of Al Shankle Construction Company to arrange the interviews between Dames & Moore and other appropriate parties at the time of our site visit;
- Reviewing federal, state, and local lists of known or potential hazardous waste sites or landfills, and sites currently under investigation for environmental violations, included:
  - . U.S. EPA National Priorities ("Federal Superfund") List (1-mile radius);
  - CERCLIS List (1/2-mile radius);

State of California Expenditures Plan List ("California Superfund") (1-mile radius);

- "Hazardous Waste and Substances Sites List Pursuant to Government Code Section 65962.5" (1/2-mile radius);
- The California Regional Water Quality Control Board's Leaking Underground Storage Tank List (1/2-mile radius);
- The California Waste Management Board's "Solid Waste Information System List" (1/2-mile radius);
- The Abandoned Sites Program Information System (ASPIS) List or the new CalSites List, if either are available from Cal EPA (site only); and
- Other agency lists deemed appropriate.
- Conducting inquiries by telephone to applicable state, county, and municipal regulatory agencies for information regarding building or environmental permits, environmental violations or incidents, and/or the status of enforcement actions at the subject property. If the project time frame allowed, visits to the offices of appropriate agencies were made, at an additional fee. In many cases, agencies required requests for information be provided in writing. Dames & Moore thus prepared letters requesting the information and submitting them to the agencies. However, in such cases it is possible that Dames & Moore did not receive responses from the agencies within the time frame for this project. If this occurred, Dames & Moore verbally notified you if a response containing environmental information regarding the site would be received from the agencies after submittal of our report; and
- Preparing a summary report describing the results of the evaluation and presenting Dames & Moore's findings and professional opinions regarding the potential presence of hazardous substances in soil and/or groundwater beneath the subject site.

RUDY'S SERVICE STATION MAINTENANCE, INC. 4359 STATE STREET ONTARIO, CA 92376 . ...

ATTENTION: MR. RUDY ARGANDONA

SUBJECT: FINAL SITE CLOSURE REPORT FOR THE PROPERTY LOCATED AT 4359 STATE STREET, ONTARIO, CA

The Department has reviewed the closure report dated April 26, 1990 prepared by Chemical Consultants and the analyses indicate that the contaminants associated with the machine pits in buildings identified as 2 and 3 have been removed to a level where the "Notice of Condition" may be released from the deed. Please find enclosed a "Release of Notice of Condition". You are required to record this instrument and pay all associated fees at the County Recorder's Office located at:

### HALL OF RECORDS 172 WEST THIRD STREET, SECOND FLOOR SAN BERNARDINO, CA 92415-0350

Pursuant to your approved "Site Remediation Proposal" dated February 14, 1990, contaminated soil excavated from the machine pits was to be transported to a site approved by the Department. To date, this has not been accomplished. In the report dated April 26, 1990 and in previous discussions you have indicated that you wish to recycle this contaminated soil at Brent Petroleum's Facility in Wilmington, Ca.

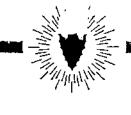

The Department cannot approve the transport of this waste to the proposed location until it receives appropriate documentation that Brent Petroleum, or any other site you select, has the required approvals to engage in this type of activity. The Department has given you it's consent to stockpile the soil for the 90 day period prescribed by law. Your accumulation start date began April 9, 1990. The disposition of this waste must be resolved by July 8, 1990.

RUDY'S SERVICE STATION MAINTENANCE, INC. 4359 STATE STREET ONTARIO, CA 92376

ATTENTION: RUDY ARGANDONA

SUBJECT: REMOVAL OF CONTAMINATED SOIL FROM FACILITY LOCATED AT: 4359 STATE STREET, ONTARIO

Dear Mr. Argandona:

The Department has received copies of the invoices in your correspondence dated July 16, 1990 verifying the removal of the stockpile of contaminated soil from the subject location to Liquid Waste Management's permitted facility in McKittrick, California. This fulfills the Department's requirements regarding these remedial actions at this time.

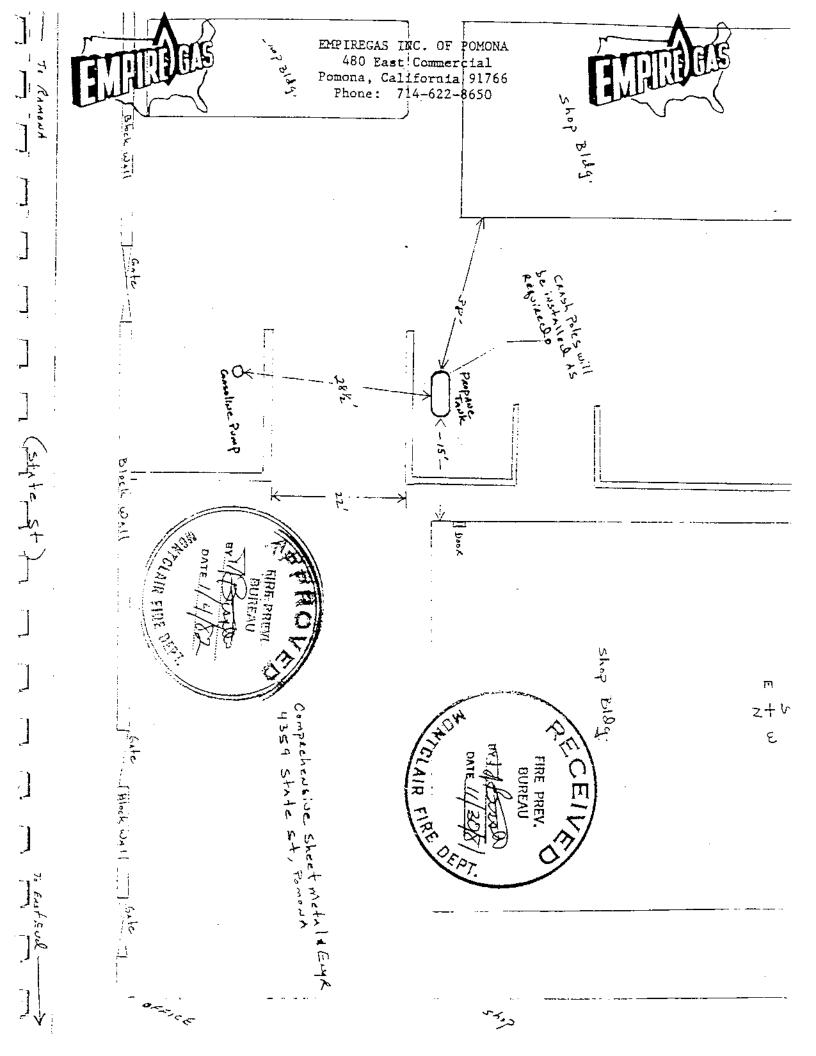

If you should have any questions, please do not hesitate to call me at (714) 387-3044.

Sincerely,

RONALD A. RIPLEY, R.F.H.S. Emergency Response/Enforcement

|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NPL<br>SRC#: 1622      | VISTA conducts a database search to identify all sites within 1 mile of your property.<br>The agency release date for NPL was January, 1994.                                                                                                                                                                                                                                                                                                            |
|                        | The National Priorities List (NPL) is the EPA's database of uncontrolled or abandoned hazardous waste<br>sites identified for priority remedial actions under the Superfund program. A site must meet or surpass a<br>predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific<br>criteria set jointly by the US Dept of Health and Human Services and the US EPA in order to become an<br>NPL site. |
| RCRA-TSD<br>SRC#: 1372 | VISTA conducts a database search to identify all sites within 1 mile of your property.<br>The agency release date for RCRIS was July, 1993.                                                                                                                                                                                                                                                                                                             |
|                        | The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDs are facilities which treat, store and/or dispose of hazardous waste.                                          |
| CORRACTS<br>SRC#: 1686 | VISTA conducts a database search to identify all sites within 1 mile of your property.<br>The agency release date for RCRA Corrective Action Sites List was January, 1994.                                                                                                                                                                                                                                                                              |
|                        | The EPA maintains this database of RCRA facilities which are undergoing "corrective action". A "corrective action order" is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.               |
| SPL<br>SRC#: 1583      | VISTA conducts a database search to identify all sites within 1 mile of your property.<br>The agency release date for Calsites Database: AWP and High Priority PEAR Sites was November,<br>1993.                                                                                                                                                                                                                                                        |
|                        | The California Environmental Protection Agency, Dept. of Toxic Substances Control maintains an inventory of facilities subject to investigations concerning likely or threatened releases of hazardous substances from those facilities. Annual Work Plan (AWP) sites and sites where Preliminary Environmental Assessments are a high priority are included.                                                                                           |
| B) DATABASE            | S SEARCHED TO 1/2 MILE                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SCL<br>SRC#: 1542      | VISTA conducts a database search to identify all sites within 1/2 mile of your property.<br>The agency release date for Calsites Database: Medium/Low Priority and No Further Action Sites (incl.<br>ASPIS) was November, 1993.                                                                                                                                                                                                                         |

The California Department of Toxic Substances Control maintains an inventory of facilities subject to investigations concerning likely or threatened releases of hazardous substances from those facilities. These are lower priority than the SPL sites.

| CERCLIS<br>SRC#: 1722      | VISTA conducts a database search to identify all sites within 1/2 mile of your property.<br>The agency release date for CERCLIS was April, 1994.                                                                                                                                                       |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            | The CERCLIS List is a compilation by the EPA of the sites which the EPA has investigated or is<br>currently investigating for a release or threatened release of hazardous substances pursuant to the<br>Comprehensive Environmental Response, Compensation and Liability Act of 1980 (Superfund Act). |
| Cal Cerclis<br>SRC#: 1710  | VISTA conducts a database search to identify all sites within 1/2 mile of your property.<br>The agency release date for Ca Cerelis w/Regional Utility Description was January, 1994.                                                                                                                   |
|                            | The California U.S. Environmental Protection Agency, Region 9 maintains an inventory of regional utility descriptions for California CERCLIS sites.                                                                                                                                                    |
| LUST<br>SRC#: 1640         | VISTA conducts a database search to identify all sites within 1/2 mile of your property.<br>The agency release date for Lust Information System (LUSTIS) was December, 1993.                                                                                                                           |
|                            | The California Environmental Protection Agency maintains an inventory of leaking underground storage tanks.                                                                                                                                                                                            |
| LUST RG8<br>SRC#: 1538     | VISTA conducts a database search to identify all sites within 1/2 mile of your property.<br>The agency release date for Region #8-Santa Ana Regional Underground Tank Database List was<br>October, 1993.                                                                                              |

|                          | The Emergency Response Notification System (ERNS) is a national database used to collect information<br>on reported releases of oil and hazardous substances. The database contains information from spill<br>reports made to federal authorities including the EPA, the US Coast Guard, the National Response<br>Center and the Department of transportation. A search of the database records for the period October<br>1986 through September 1993 revealed the following information regarding reported spills of oil or<br>hazardous substances in the stated area. |
| RCRA-LgGen<br>SRC#: 1372 | VISTA conducts a database search to identify all sites within 1/8 mile of your property.<br>The agency release date for RCRIS was July, 1993.                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                          | The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Large Generators are facilities which generate at least 1000 kg./month of non-acutely hazardous waste ( or 1 kg./month of acutely hazardous waste).                                                                                 |
| RCRA-SmGen<br>SRC#: 1372 | VISTA conducts a database search to identify all sites within 1/8 mile of your property.<br>The agency release date for RCRIS was July, 1993.                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                          | The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Small and Very Small generators are facilities which generate less                                                                                                                                                                  |

than 1000 kg./month of non-acutely hazardous waste.

RE: Site Assessment and proposed Site Remediation for the property located at 4359 State Street, Ontario, CA.

SULTANTS

The initial "Site Characterization and Remediation Report" submitted by Dames & Moore, see appendix D, did not fully address the apparent subsurface soil contamination in and around the machine pits in Buildings 2 and 3 between the 10 and 20 foot depths.

The objective of this report is to address the two primary questions pertaining to the site remediation for the above property. First, the additional site sampling and testing to determine the lateral and vertical extent of the hydrocarbon contamination detected in the subsurface soil under the machine pits located in Buildings 2 and 3. Second, a proposed method for the removal and disposal of the contaminated soil.

The following report is a summary of the geologists final report, see appendix A; additional site soil sampling and testing, see appendix B; and the Site Safety Plan and related documentation from Sentinel Waste Management, Inc., see appendix C.

BUILDING 2, SOIL TESTING SUMMARY AND MITIGATION

The additional visual investigation of the machine pit in Building 2 indicated that the pit was lined with sheets of cold rolled steel that were tacked together and not continuously welded. It was also determined that the bottom of the pit was sloped such that any liquids within the pit drained to a small collection sump located in the northwest corner of the pit. Additional sampling and testing, see appendix A and B, indicated that the soil beneath the pit was heavily contaminated with petroleum hydrocarbons between the depths of 8 and 20 feet. Page 2 of 5 Sentinel Waste Management, Inc. February 14, 1990

The pattern of the subsurface contamination appears to be that of an oval, see appendix A, page 4.

The following soil cleanup outline is proposed.

1. Prepare and follow a Site Safety Plan regarding the removal, disposal and compaction of the soil.

2. Remove the debris from the machine pit and the tacked metal walls.

3. Take two grab samples from the middle and east end of the pit. These samples would be analyzed for Total Petroleum Hydrocarbons, EPA Method 418.1. If these values are equal to or less then below 100 mg/kg then the east end of the machine pit would be considered clean. Additional testing around the machine pit tends to indicate that the contamination is confined to the west end of the pit.

4. Remove the soil, as defined in the geologist's report, to a depth of approximately 8 feet and stock pile in another area of the building. Since this material is clean it will be used to backfill the hole once the cleanup is completed. This soil will be monitored to assure that it is not contaminated.

5. The soil, between the depths of 8 and 22 feet, will be removed, stock piled and then disposed of by Sentinel Waste Management, Inc. at an approved disposal site. Prior to the removal of any contaminated soil form the site the disposal site will be verified and confirmed with the San Bernardino Department of Environmental Health Services.

6. Samples will be collected at the bottom of the excavation, approximately 4, and will be tested for Total Petroleum Hydrocarbons, EPA Method 418.1 and Volatile Organics, EPA Methods 8010 and 8020. The site will be clean if the TPH values are equal to or less then below 100 mg/kg and the volatile organics are equal to or less then 10 ug/kg.

7. When the site is considered clean the excavation will be backfilled and compacted to 90 %.

8. A registered geologist will be on-site at all times to supervise the excavation and sampling. All samples will be iced, labeled and then transported to Chemical Consultants for analysis. All chain-of-custody protocols will be observed. Page 3 of 5 Sentinel Waste Management, Inc. February 14, 1990

#### BUILDING 3, SOIL TESTING SUMMARY AND MITIGATION

Additional sampling and testing of the soil beneath the west machine pit in Building 3 indicated that the soil directly beneath the bottom of the north end of the pit is contaminated to a depth of approximately 5 feet below the bottom of the pit. It is proposed to remove the soil in the north corner of this pit. To accomplish this a five foot square by five foot deep section of the pits north bottom will be removed. Following removal of the contaminated soil a sample will be collected from the bottom of the excavation and tested for Total Petroleum Hydrocarbons, EPA Method If the TPH value is equal to or less then 100 mg/kg 418.1. the area will be considered clean. If the TPH value exceeds this limit then additional soil will be removed and the testing repeated until the TPH value meets acceptable limits.

The following soil cleanup outline is proposed.

- 1. Prepare and follow a Site Safety Plan regarding the removal, disposal and compaction of the soil.
- 2. Remove the soil, as defined in the geologists report.

3. The soil, between the depths of 8 and 13 feet, will be removed, stock piled and then disposed of by Sentinel Waste Management, Inc. at an approved disposal site. Prior to the removal of any contaminated soil form the site the disposal site will be verified and confirmed with the San Bernardino Department of Environmental Health Services.

4. One Sample will be collected at the bottom of the excavation and will be tested for Total Petroleum Hydrocarbons, EPA Method 418.1 and Volatile Organics, EPA Methods 8010 and 8020. The site will be clean if the TPH values are equal to or less then 100 mg/kg and the volatile organics are equal to or less then 10 ug/kg.

5. When the site is considered clean the excavation will be backfilled and compacted to 90 %.

6. A registered geologist will be on-site at all times to supervise the excavation and sampling. All samples will be iced, labeled and then transported to Chemical Consultants for analysis. All chain-of-custody protocols will be observed. Page 4 of 5 Sentinel Waste Management, Inc. February 14, 1990

Addendum, Ontario-Page 1

#### PREFACE

Chemical Consultants of Anaheim hereby submits, on behalf of Sentinel Waste Management, Inc., this addendum to our report dated December 20, 1989; a subsurface soils investigation conducted at 4359 State Street, Ontario, California, to permanently close the machine pits. The purpose of this report is to fulfill the leak detection criteria for a permit that assures compliance with the Department of Health Services and the San Bernardino County Code.

Addendum, Ontario-Page 2

#### PURPOSE AND SCOPE

The test results of the drilling and sampling done in December, 1989, and described in our report dated December 20, 1989, indicated a requirement for further characterization of the machine pit area in Building 2. In Building 3, however, only one boring showed high hydrocarbon contaminant at five feet, which is attributed to surface spill. Therefore, no further evaluation work was done, or planned in Building 3.

In Building 2, this additional exploratory work was carried out because of sub-surface contamination was found in three borings at the machine pit. The work included soil sampling by trenching with a backhoe and undisturbed drive sampling using a hand auger. The purpose of the sampling and testing was to find and outline the limits of the soil contaminant, and to determine if soil remediation by excavation and removal can be accomplished at this site.

#### METHODOLOGY

Two trenches were dug and soil-core samples were taken on January 2 and 3, 1990, by Sentinel Waste Management persons as directed by Chemical Consultants. The project was continually monitored by a State registered geologist.

The backhoe trench was cut by one foot wide bucket with a maximum depth capacity of eighteen feet. Soil samples were cut from the bucket as brought up from measured depth intervals. Sampling beyond this depth was carried out by hand auger with extensions and adaptor and driven 6-inch brass tubes. Therefore, all samples beyond eighteen feet were hand driven as well as the samples from fifteen feet in the east-west trench. The sampling equipment was washed between samples.

#### LOCATION AND TEST RESULTS

A total of twenty six soils samples were taken for testing from ten locations as shown on page 4; a plan view at a scale of one inch equal to five feet. The location of the samples are shown by an asterisk. All but one sampling location are within the trench excavation area. Location BH7 is shown outside to the west of the original trench because the north-south trench had caved to this point on the plan. All samples were tested for total petroleum hydrocarbon content (TPH) by EPA Method 418.1. All test results are shown on this plan view, page 4, and some are on the cross section shown on page 5.

#### OUTLINE OF CONTAMINATION

Based on the data obtained and depicted on page 4 and page 5 of this report, it is shown that the plume of contaminated soil extends laterally northeast to southwest, through the sump as a point-source and mid-point, for a total distance of about 12 feet to the southwest and 8 feet to the northeast. The total width of the plume is expected to be 10 feet. The cross section on page 5 indicates a total depth subject to remediation is expected to be less than twenty five feet of depth.

Addendum, Ontario-Page 3

#### REMEDIATION

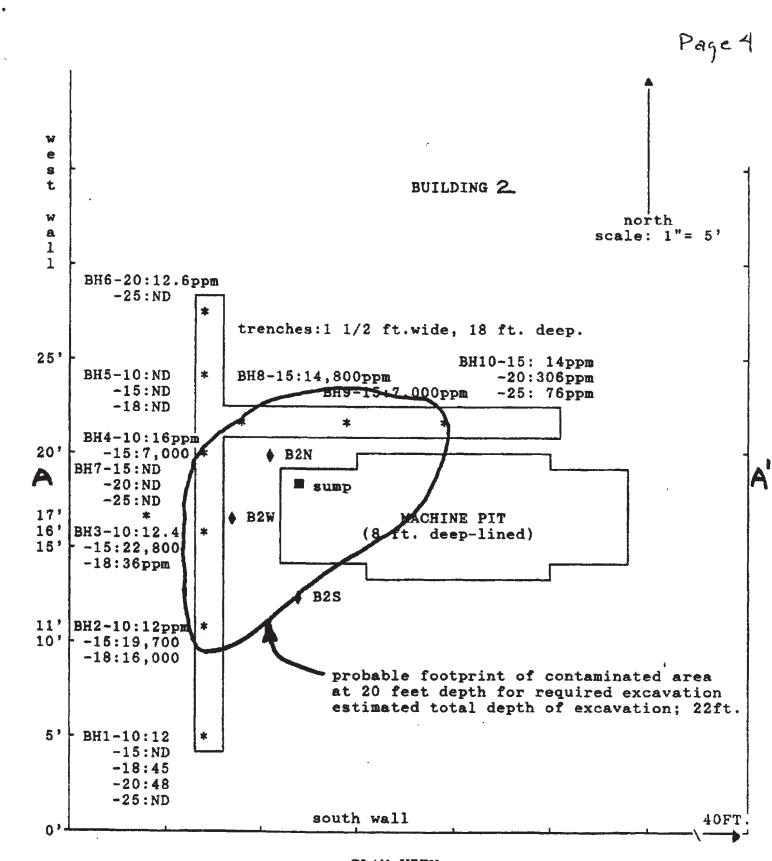

Based on these findings, remediation by excavation and removal of contaminated soil is practical at this site. Because the plume is considered to originate from the sump at 8 feet below the ground surface, a great volume of soil which is proven to be clean overburden can be excavated and stock piled on either side of the excavation. The stock piles should be monitored for cleanness, and should be used for backfill.

During trenching, the trench walls were weak and subject to caving. For this reason, planned digging of the pit for the removal of the plume should include heavy shoring. This is especially true along the back of the north-south trench along the west wall of the building.

#### CLOSURE

This work has been performed and this report prepared in accordance with generally accepted environmental science and engineering practice. Conclusions and recommendations are based solely on the information identified in this report. This warranty is in lieu of all other warranties, expressed or implied.

#### PREFACE

Chemical Consultants of Anaheim hereby submits, on behalf of Sentinel Waste Management, Inc., to the Bank of America a report of a supplemental subsurface soils investigation conducted at 4359 State Street, Ontario, California, to permanently close two machine pits located at that address. The purpose of this report is to fulfill the leak detection criteria for a permit that assures compliance with the Department of Health Services and the San Bernardino County Code.

### PURPOSE AND SCOPE

On December 13, 14, and 15, 1989 Chemical Consultants together with Sentinel Waste Management, Inc. conducted a subsurface soils investigation to find the extent of ground contamination by hydrocarbon compounds which were previously identified in two prior studies. These prior studies were conducted by Dames and Moore in August and December, 1988. They included finding suspected contamination beneath two machine pits in two fabrication buildings at this site.

The pits housed machines using cutting oils and cleaning solvents. The first investigation was confined to a shallow, area-wide study. In the second study, two borings were drilled through the base of the machine pits to about 30 feet in depth in which various levels of hydrocarbon contaminants were found.

The objective of the work described here is to further quantify and limit the areal extent of the contaminant as well as its depth, and to identify methods of remediation or treatment.

The scope of this report is to document the soil conditions found beneath the suspected contamination areas and to demonstrate where prior leakage has occurred into the soils from the machine pits. This includes the sampling and logging of six borings. Collecting soil samples at five foot intervals from the borings, transporting them under sealed chain-of-custody conditions, and testing them in a certified analytical testing laboratory for total petroleum hydrocarbons (TPH); benzene, toluene, xylenes, and ethylbenzene (BTXE); and dichlorobenzenes. Documentation of the test results and the chain-of-custody are included herein.

#### LOCATION OF SITE

The address of this site is <u>4359 State Street</u>, <u>Ontario</u>, <u>California</u>. This facility is west of Central Avenue between the San Bernardino Freeway on the north and the Pomona Freeway on the south. The site is between central Ontario and Pomona and close to the Los Angeles-San Bernardino County line. The closest intersection is Ramona Avenue and State Street just east of the site. The Southern Pacific Railroad Line occupies the north side of State Street.

#### SITE GEOLOGY

The ground surface elevation is about nine hundred and fifteen feet above sea level. The borings are located in the natural ground; generally a highly permeable sandy soil. The natural surface drainage is to the south, and no free water was encountered in the drill holes.

The area is underlain by recent unconsolidated alluvial sediments, chiefly sands and gravels. The site is situated near the at the south end of a great alluvial fan which emanates from the San Gabriel Mountains and from Mount San Antonio drainage.

01/25/1990 16:45 FROM S.Stankov/ C.E.G.

P.03

Ontario, Page 2

Ontario, Page 3

Hydrologically, this site is in the Chino Ground Water Basin, a part of the greater Upper Santa Ana Valley water shed. Drainage from this site area is collected by San Antonio Creek and it is directed to Prado Dam.

The anticipated potable ground water level beneath the site is more than three hundred feet below the ground surface, excluding any possible perched ground water zones above this depth.

## LOCATIONS OF THE HAZARDOUS MATERIAL

A plot plan of the site is included with this report. Two interconnected machine pits are located in the steel fabrication structure designated as Building 3, and one pit is located in the fabrication structure, Building 2. These pits are about eight feet deep. They are concrete and steel lined and have a concrete base. A collector trench (sump) two feet square and one foot deep is at the bottom of the west end of the two interconnected pits in Building 3, and a sump is also in the west end of the pit in Building 2. The sumps have no lining in their base. The borings were drilled to examine these areas where potential leaks into the subsoil was indicated by the previous investigations.

#### FIELD METHODOLOGY

All borings were drilled by ABC Liovin Drilling of Long Beach, California. A total of six borings were drilled, thee at each site using six inch diameter hollow stem augers, The augers were washed between each boring and the sampling tools were washed on extraction of each sample to avoid any cross contamination.

Drill cutting were placed in 55-gallon drums which were sealed and labeled for disposal by Sentinel Waste Management. Chemical Consultants staff maintained field notes during operations. A state certified geologist observed the drilling, logged the borings and classified the soil samples. Soil samples were collected and retained from every five foot interval in the drill holes. Where the boring logs show no sample at a five foot interval, sampling was attempted but could not be recovered from the drill hole.

Soil "grab samples" were periodically collected to assist in the classification of the soils throughout the borings. The soils are classified in accordance with the Unified Classification System. This system is summarized in the appendix.

Soil samples were obtained from the borings using a split barrel sampler equipped with three, six inch by two and a half inch diameter brass liners. Upon extraction from the sampler, the brass tubes containing the soil to be analyzed were immediately capped and sealed with tape, labeled and placed on ice in a cooler for delivery to the laboratory. Chemical Consultants staff transported the samples to the laboratory at the end of each working day. Chain-of-custody protocol was followed. 01/25/1990 16:47 FROM S.Stankov, C.E.G.

Ontario, Page 4

## RESULTS OF SAMPLING AND TESTING

Examination of the soils during drilling in Building 3; borings B4N, B4W, and B4S revealed no evidences of soil discoloration, nor petroliferous odors. However, the drill holes in Building 2; borings B2N, B2W, and B2S indicated detectable levels of contamination by odors typical of petroleum hydrocarbons in the soil. This is consistent with laboratory findings which show a low level of TPH from the drill holes in Building 3, higher levels from Building 2.

TABLE 1. ANALYTICAL RESULTS FOR SOIL SAMPLES COLLECTED ON DECEMBER 13, 14, 15, 1989, AT 4359 STATE STREET, ONTARIO, CA.

714 831 9725

01/25/1990 16:51 FROM S.Stankov, C.E.G.

P.01

Ontario, Page 5

### RECOMMENDATION

Based on the observations of the drilling and the results of the laboratory testing for total petroleum hydrocarbons as show in the table above, further exploratory sampling and testing in Building 2 is warranted in order to find the lateral limits of the contaminated area.

Additional exploratory sampling and testing of the machine pits in Building 3 should not be required. However, screening of the soil is recommended as excavation progresses. A portable photoionization analyzer that has a minimum detectability limit of less than 100 mg/kg. should be used to remove all of the contaminated material found in the area of sample B4WA-5.

#### REMEDIATION

Constituents in the soil at this site of most concern to the governing agencies based upon existing standards for the protection of drinking water, are benzene, xylenes, ethylbenzene, and chlorinated hydrocarbons. Clean up levels are subject to approval of the governing agency; however, remediation of soil to agency satisfaction can most simply be accomplished by excavation and removal of contaminated soil to an appropriate land disposal facility. Treatment on site by bioremediation is another possibility.

#### CLOSURE

This work has been performed and this report is prepared in accordance with generally accepted environmental science and engineering practice. Conclusions and recommendations are based solely on the information identified in this report. This warranty is in lieu of all other warranties, expressed or implied. If any questions arise regarding this report or project, please contact the undersigned.

#### A REPORT PREPARED FOR :

SENTINEL WASTE MANAGEMENT, INC. 1240 Simon Circle Anaheim, CA 92806 PAGE: 1 of 2 DATE: January 08, 1990 RECEIVED: 01/02/90 & 01/03/90 CUSTOMER P.O.: 7629 LOG NUMBER: SEE BELOW

TYPE MATERIAL TESTED: Received (29) Soil samples, described below, taken from 4359 State Street, Montclair, CA by Chemical Consultants. Project -

Rudy's, Job # 489.

**REASON FOR TEST:** Tested (27) of the samples to determine concentration of constituents listed below for customer's information.

RESULTS:

**\*\*** NDTE: Not reported due to matrix interferences.

INCREASED DETECTION LIMITS ON HALDGENATED VOLATILE ORGANICS DUE TO SAMPLE MATRIX.

TEST METHODS: Total Petroleum Hydrocarbons--EPA Method 418.1. Total Petroleum Hydrocarbons--"LUFT" Field Manual, revised edition May 88, Appendix C - Subsection D - EPA 8015 (modified), FID Detector. Halogenated Volatile Organics-EPA 8010, Method 3810, ECD Detector. Aromatic Volatile Organics---EPA 8020, Method 3810, PID Detector.

Respectfully Submitted,

Chemical Consultants

Enclosure: Chain of Custody

1

The following emergency escape routes are designated for use in those situations where egress from the Exclusion Zone cannot occur through the decontamination line: (describe alternate routes to leave area in emergencies) FOLLOW SAFE FYIT SIGNS AND/OR SAFETY OFFICER

In all situations, when an onsite emergency results in evacuation of the Exclusion Zone, personnel shall not reenter until:

- 1. The conditions resulting in the emergency have been corrected.
- 2. The hazards have been reassessed. The Site Safety Plan has been reviewed.
- 3.
- Site personnel have been briefed on any changes in the Site Safety 4. Plan.

5. Personal Monitoring

The following personal monitoring will be in effect on site:

Personal exposure sampling: N/A: OTHER THAN WITH EMERGENCY . SITUATIONS OR EXPOSURES

. If

Medical monitoring: The expected air temperature will be \_\_( •P) it is determined that heat stress monitoring is required (mandatory if over 70°P) the following procedures shall be followed: (describe procedures in effect, i.e., monitoring body temperature, body weight, pulse rate) N/A; OR AS NEEDED IF EXTREME HEAT SHOULD OCCUR

All site personnel have read the above plan and are familiar with its · . provisions.

The following emergency escape routes are designated for use in those situations where egress from the Exclusion lone cannot occur through the decontamination line: \_\_\_\_\_\_ (describe alternate routes to leave area in emergencies) FOLLOW SAFE FYIT SIGNS AND/OR SAFETY OFFICER-

In all situations, when an onsite emergency results in evacuation of the Exclusion Zone, personnel shall not reenter until:

1. The conditions resulting in the emergency have been corrected.

- 2. The hazards have been reassessed.
- The Site Safety Plan has been reviewed. Site personnel have been briefed on any changes in the Site Safety 3.
- 4. Plan.

#### Personal Monitoring 5.

1

N.

. 1

The following personal monitoring will be in effect on site:

Personal exposure sampling: N/A: OTHER THAN WITH EMERGENCY SITUATIONS OR EXPOSURES 1f

Medical monitoring: The expected air temperature will be ( •7) it is determined that heat stress monitoring is required (mandatory if over 70 P) the following procedures shall be followed: (describe procedures in effect, i.e., monitoring body temperature, body weight, pulse rate) N/A; OR AS NEEDED IF EXTREME HEAT SHOULD OCCUR

All site personnel have read the above plan and are familiar with its provisions. ¥ .

# SUMMARY OF PLANNED SITE ACTIVITIES

a. On-site Project Manager: Marty Martinez

·-- .

2.1

•

| t   | ask N . Description                                                                                                                                                                    |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A-1 | The purpose and scope of this site assessment plan is to<br>evaluate the nature and extent of contaminated soil located<br>inside of building on site (see attached site map)          |
| A-2 | upon arriving on site all personnel involved will attend a<br>safety tail-gate meeting and job briefing                                                                                |
| a-3 | Following all State and Federal laws, proper protective<br>clothing and equipment will be                                                                                              |
| A-4 | <u>Apx.</u> samples will be taken from 6 borings<br>utilizing a hand held auger.                                                                                                       |
| A-5 | Samples will be firmly packed into laboratory prepared<br>sample container. the sample will be stored in a cooler with<br>blue ice in the fiesd and through shipment to the laboratory |
| A-6 | Soil sampling auger and equipment will be cleaned between<br>each sample using a alconox solution, rinsed in distilled<br>water, and dried.                                            |
|     |                                                                                                                                                                                        |
|     |                                                                                                                                                                                        |
|     |                                                                                                                                                                                        |
|     |                                                                                                                                                                                        |

### SAMPLING AND ANALYTICAL

#### SAMPLING

a. What is to be sampled (i.e. Drums,Tanks,Soil):
<u>Contaminated soil</u>
b. Level of protection to be used when sampling (i.e. P.P.E.,safety equipment).: Level "C" protective clothing and equipment will be warn.
c. Methods to be utilized for sampling each waste stream (list method,quantity of samples,type of container and method used for storage and shipping).
